Transportation Building
395 John Ireland Boulevard
Saint Paul, MN 55155

February 2011

Dear Citizens of Minnesota,

I am pleased to share with you the Greater Minnesota Transit Investment Plan. This plan is the result of extensive collaboration between the Minnesota Department of Transportation and citizens, stakeholders, and partners throughout Minnesota. I want to thank everyone who took the time to participate in our outreach meetings and provide comments and suggestions throughout the planning process.

The Greater Minnesota Transit Investment Plan provides the link between the goals and strategies established in the Greater Minnesota Transit Plan, published in 2009, and funding allocations to each public transit system in Greater Minnesota. The plan analyzes projected demand for transit services in Greater Minnesota and the cost of meeting that demand from 2010 until 2030. In addition, the plan outlines Mn/DOT's investment priorities for expanding or reducing transit service according to future state and federal funding levels. Although specific investment priorities will continue to evolve over time, promoting mass transit as a means to improve mobility and accessibility for all Minnesotans will remain essential to Mn/DOT's core strategies.

The Greater Minnesota Transit Investment Plan demonstrates that demand for public transit services in Minnesota is growing. State, federal, and local support will be needed to provide additional transit services to meet this demand. Regardless of future funding levels, Mn/DOT will continue to work toward its mission to provide the highest quality, dependable multimodal transportation system to Minnesotans. The full copy of the Greater Minnesota Transit Investment Plan and additional information are also available on Mn/DOT's website:

<http://www.dot.state.mn.us/transit/reports/investmentplan/>.

Sincerely,

A handwritten signature in black ink that reads "Thomas K. Sorel".

Thomas K. Sorel

Commissioner

An Equal Opportunity Employer

Executive Summary

Minnesota's public transit systems provide transportation alternatives to driving alone and enable all citizens to participate in the state's communities and economy. The Minnesota Department of Transportation (Mn/DOT)'s strategic vision is to be a global leader in transportation. Mn/DOT is committed to upholding public needs and collaboration with internal and external partners to create a safe, efficient, and sustainable transportation system for the future. To that end, Mn/DOT's strategic directions include improving mobility and accessibility for all Minnesotans through the promotion of public transportation. The Greater Minnesota Transit Investment Plan projects future need for transit services in Greater Minnesota and estimates the cost of providing additional services to reduce unmet need.

In 2009, Mn/DOT completed the Greater Minnesota Transit Plan, a policy plan that defined the vision, policies, and strategies for transit in Greater Minnesota. The Greater Minnesota Transit Investment Plan identifies specific priorities for future transit investment. These investment priorities connect the goals of the policy plan to Mn/DOT's annual funding allocation to individual transit systems. The Greater Minnesota Transit Investment Plan will help decision-makers prepare for growing transit demand in Minnesota and increase public understanding of Mn/DOT's priorities for future transit investment.

Minnesota Statutes, Section 174.24

Legislative direction for the Greater Minnesota Transit Investment Plan requires Mn/DOT to:

- Conduct an analysis of total transit needs in Greater Minnesota
- Calculate the level of service required to meet total transit service needs in Greater Minnesota
- Prepare an analysis of costs and revenues
- Develop a plan to reduce total [unmet] transit service needs

In addition, the Legislature directed Mn/DOT to specifically identify the passenger levels, levels of service, and costs necessary to address the following targets:

- Meet 80 percent of total transit service needs in Greater Minnesota by 2015
- Meet 90 percent of total transit service needs in Greater Minnesota by 2025
- Identify costs of meeting 100 percent of total transit service needs every five years from 2010 to 2030

Goal

The goal of the Greater Minnesota Transit Investment Plan is to reduce unmet transit service needs by:

- Understanding the needs of current transit customers and developing a profile of current riders using **market research**
- Determining total and unmet transit needs at the county level using **technical analysis**
- Building support for transit investment priorities through extensive **public outreach** throughout the planning process

Current Level of Service

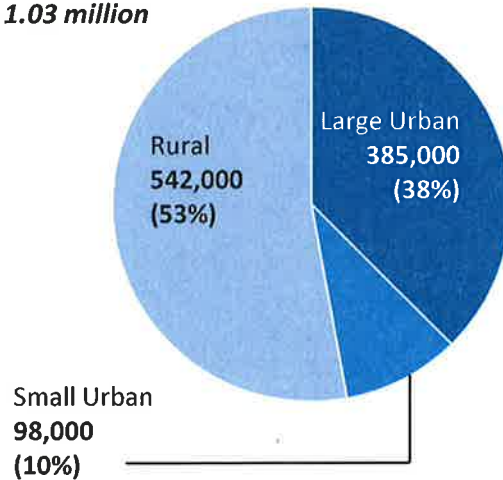

Public transportation needs in Minnesota are growing along with Minnesota’s overall population and the population of transit-dependent riders. Minnesota’s public transportation systems are growing in response to these needs. In 1990, 40 of Greater Minnesota’s 80 counties had some form of public transportation system; in 2009, the number of counties with public transportation systems was 76.

Greater Minnesota transit systems served 11.1 million passenger trips statewide in 2009. A total of 1.03 million service hours were operated, and transit vehicles traveled 14.9 million miles to serve passenger needs. Local, state, and federal sources combined to fund transit programs at a level of \$55.3 million. These statistics are detailed by transit system peer group below.

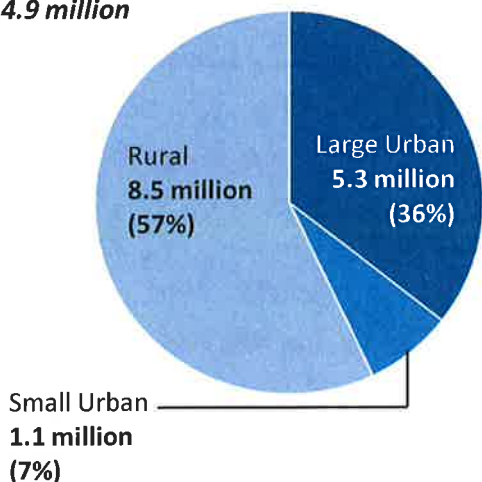

Passenger Trips
11.1 million

Service Hours
1.03 million

Service Miles
14.9 million

Operating Cost
\$55.3 million

Summary of Needs

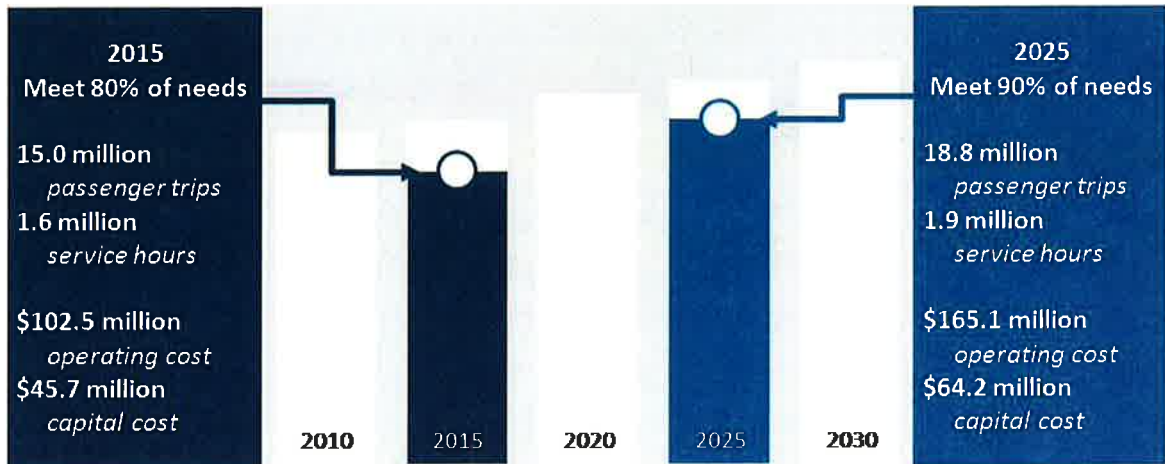

In order to satisfy the legislative mandate for determining transit needs and costs, Mn/DOT developed models for calculating passenger demand, service levels needed to meet demand, and operating and capital costs of providing service. Using market research as a baseline, the models yield a reasonable foundation for quantifying Greater Minnesota’s transit needs and costs in future years. In 2009, a total of \$55.3 million was spent to provide 11.1 million passenger trips and 1.03 million service hours. Based on the need estimates conducted as part of this plan, 2009 services met approximately 61 percent of total passenger demand and approximately 57 percent of projected service hour needs statewide.

To meet 100 percent of Greater Minnesota’s projected transit needs, services would need to be provided at the following levels:

	2010	2015	2020	2025	2030
Total Passenger Demand (millions of trips)	18.1	18.8	20.2	20.9	22.0
Service Hours to Meet Demand (millions)	1.8	2.0	2.1	2.1	2.2
Annual Operating Cost (millions)	\$103.7	\$128.1	\$153.8	\$183.4	\$216.9
Capital Cost - Vehicle Replacement (millions, five-year totals)	--	\$50.2	\$57.9	\$66.7	\$76.6
Capital Cost - Additional Vehicles (millions)	\$33.5	\$6.9	\$4.3	\$4.6	\$4.4

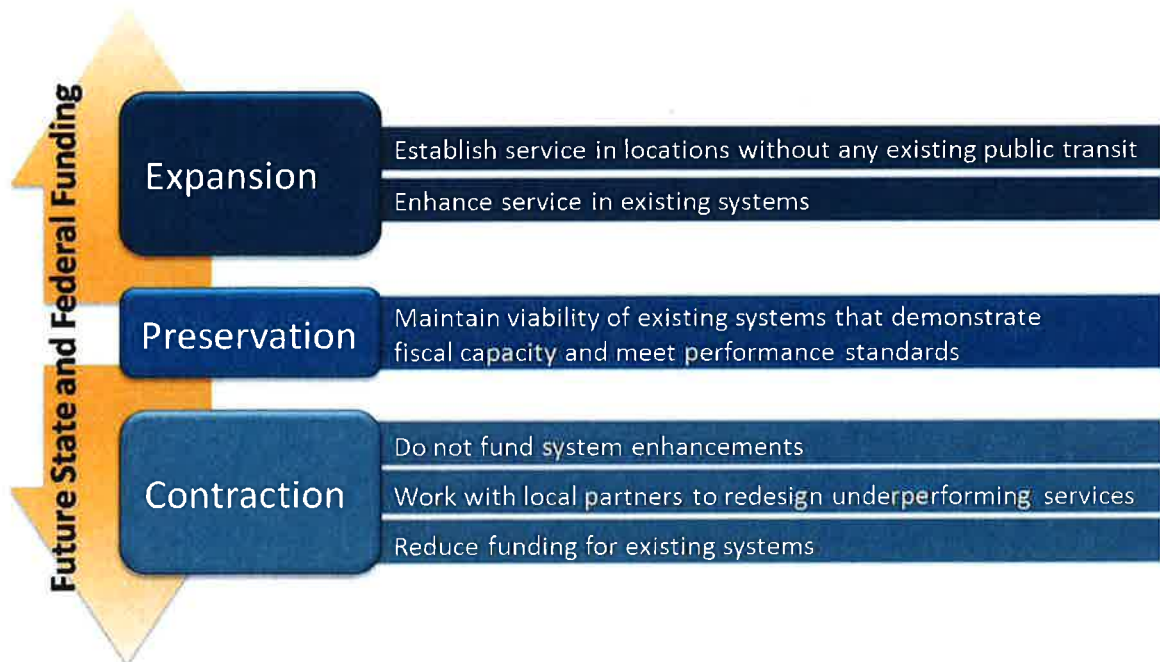

The 2010 additional vehicle capital cost value represents the fleet required to fully close the gap between current levels of service and new service required to meet 100 percent of estimated needs. Values in subsequent years represent the fleet required to meet new levels of service to serve expanding transit need.

Meeting the specific legislative targets for 2015 and 2025 would require the following levels of service:

Summary of Transit Investment Priorities

In an effort to prioritize how Mn/DOT would reduce unmet transit need, the Greater Minnesota Transit Investment Plan sets priorities to guide future investments in public transit. The outcome is a delineation of transit investment priorities that correspond to changing funding scenarios. Mn/DOT’s approach to increased or decreased funding scenarios is illustrated below. Mn/DOT’s first priority for Greater Minnesota transit is to preserve existing systems by funding each system at a level sufficient to continue the current level of service in the future.

In scenarios of increased future funding, Mn/DOT's highest priority for Greater Minnesota service expansion is to establish service in locations without any existing public transit. Assuming all eligible locations are served by public transit, Mn/DOT's priorities for service expansion, listed in order of importance, include:

- Expand service hours in the morning and night to provide more trips.
- Expand multi-county services to link more communities.
- Provide service on more days of the week.
- Expand service frequencies and coverage.
- Expand service to provide consistent levels of service statewide.

In scenarios of reduced future funding for transit, Mn/DOT will evaluate system applications according to the following principles, listed in consecutive order:

- Funding for system enhancement will not be considered.
- Mn/DOT will work with systems to redesign underperforming service segments.
- Mn/DOT will reduce state and federal funding to those systems with underperforming service segments.
- If decreases in state and federal funding for transit necessitate additional reductions, Mn/DOT will reduce funding allocations to systems that meet or exceed performance standards.

Identified Program Management Tools

Mn/DOT will work with systems to ensure systems incorporate the following program management tools, listed in no particular order, to help implement the investment priorities:

- Explore ways to increase the use of technology to gain efficiencies in transit delivery.
- Refine services using service-level performance measures to increase efficiency of transit delivery.
- Coordinate with other transit providers, including tribes (e.g. White Earth Public Transit), volunteer drivers, Section 5310 programs for the elderly and persons with disabilities, and taxi providers, to increase service delivery options.
- Increase marketing to reach more customers and make citizens more aware of the services that exist in their community.
- Provide transit service without charge for disabled veterans (applies only to fixed-route systems).

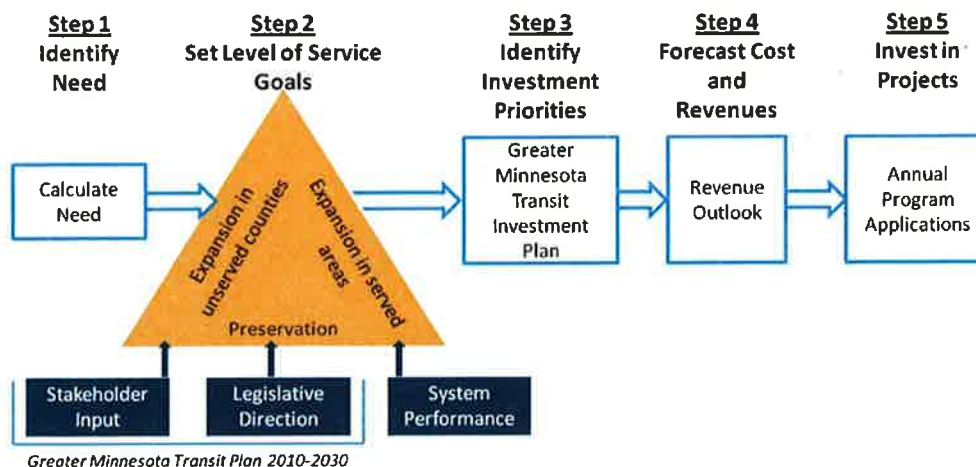

Chapter 1: Plan Purpose and Development

Minnesota’s public transit systems provide transportation alternatives to driving alone and enable all citizens to participate in the state’s communities and economy. The Minnesota Department of Transportation (Mn/DOT)’s strategic vision is to be a global leader in transportation. Mn/DOT is committed to upholding public needs and collaboration with internal and external partners to create a safe, efficient, and sustainable transportation system for the future. To that end, Mn/DOT’s strategic directions include improving mobility and accessibility for all Minnesotans through the promotion of public transportation. The Greater Minnesota Transit Investment Plan projects future need for transit services in Greater Minnesota and estimates the cost of providing additional services to reduce unmet need.

The Greater Minnesota Transit Investment Plan and its predecessor, the Greater Minnesota Transit Plan 2010-2030, are part of Mn/DOT’s Family of Plans, which includes the Statewide Transportation Policy Plan and mode-specific plans for highways, freight and passenger rail, bicycles and pedestrians, aviation, and transit. Together, the Family of Plans establishes Mn/DOT policy, objectives, strategies, performance targets, and investment priorities for Minnesota’s transportation system.

In 2009, Mn/DOT completed the Greater Minnesota Transit Plan, a policy plan that defined the vision, policies, and strategies for transit in Greater Minnesota. The Greater Minnesota Transit Investment Plan identifies specific priorities for future transit investment. These investment priorities connect the goals of the policy plan to Mn/DOT’s annual funding allocation to individual transit systems. The Greater Minnesota Transit Investment Plan will help decision-makers prepare for growing transit demand in Minnesota and increase public understanding of Mn/DOT’s priorities for future transit investment. Figure 1.1 depicts the main elements of the Greater Minnesota Transit Investment Plan and how it will be integrated with Mn/DOT’s programming process.

Figure 1.1 Greater Minnesota Transit Planning and Programming Process

Minnesota Statutes, Section 174.24

Specific directions for the Greater Minnesota Transit Investment Plan are defined in Minnesota Statutes, Section 174.24 Subdivision 1a (emphasis added):

The commissioner [of transportation] shall develop a greater Minnesota transit investment plan that contains a goal of meeting at least 80 percent of total transit service needs in greater Minnesota by July 1, 2015, and meeting at least 90 percent of total transit service needs in greater Minnesota by July 1, 2025.

The plan must include, but is not limited to, the following:

1. an **analysis of ridership and total transit service needs** throughout greater Minnesota;
2. a calculation of the level and type of **service required to meet total transit service needs**, for the transit system classifications as provided under subdivision 3b, paragraph (c), of urbanized area, small urban area, rural area, and elderly and disabled service;
3. an **analysis of costs and revenue options**;
4. a **plan to reduce total [unmet] transit service needs** as specified in this subdivision; and
5. identification of the **operating and capital costs** necessary to meet 100 percent of the greater Minnesota transit targeted and projected bus service hours, as identified in the greater Minnesota transit plan, for 2010, 2015, 2020, 2025, and 2030.

The plan must specifically address special transportation service ridership and needs. The plan must also provide that recipients of operating assistance under this section provide fixed-route public transit service without charge for disabled veterans in accordance with subdivision 7.

Goal

The goal of the Greater Minnesota Transit Investment Plan is to reduce unmet transit service needs by employing the following strategies:

- Understanding the needs of current transit customers and developing a profile of current riders using **market research**
- Determining total and unmet transit needs at the county level using mathematical modeling and **technical analysis**
- Building support for transit investment priorities by incorporating extensive **public outreach** throughout the planning process

Each of the above strategies was addressed in the planning process. These components are outlined in the following sections.

Market Research

Mn/DOT used a range of market research techniques to qualitatively and quantitatively understand how transit is perceived in Greater Minnesota. Market research tasks included the following:

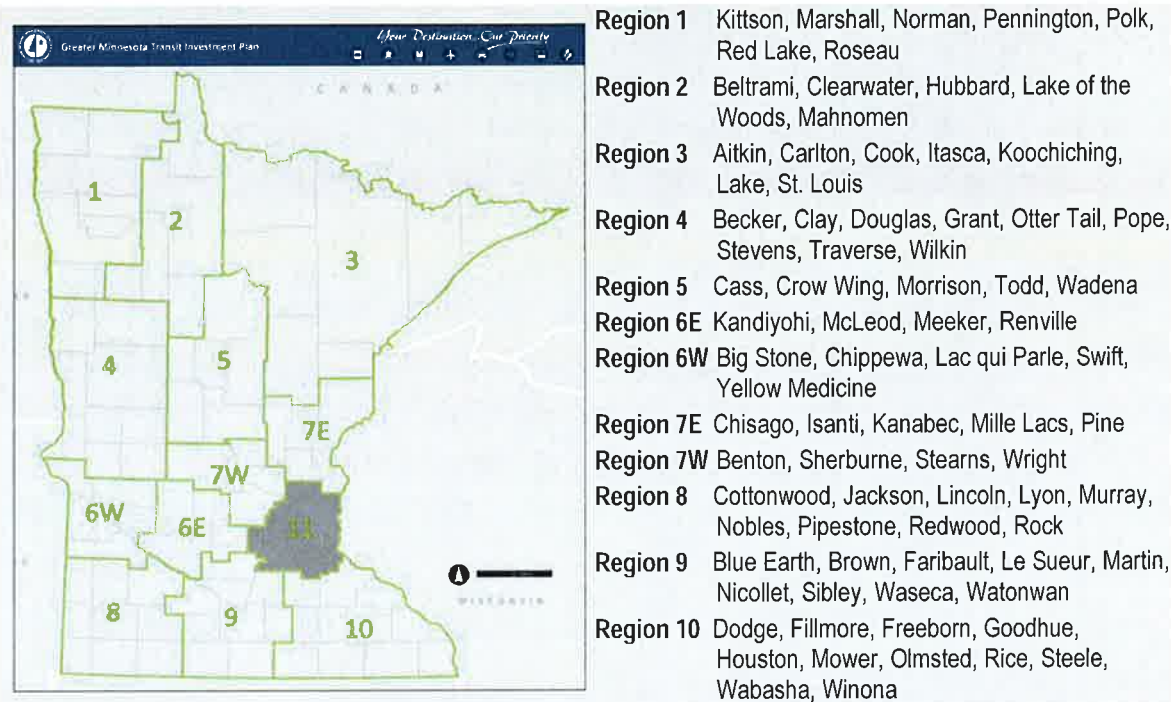

- **Demographic profiles.** Mn/DOT undertook a mapping process to graphically represent the connectivity between transit services, key destinations, and transit-dependent populations. The goals of the exercise were to identify and interpret significant demographic patterns, determine whether certain populations who may depend on transit are currently served, and identify gaps in service.
- **Focus groups.** Mn/DOT conducted a series of 12 focus groups to consult with non-users of public transit and gather perceptions of transit services and transit need among this group. Focus group participants included seniors, minorities, persons of low income, and persons with disabilities.
- **Onboard surveys.** Mn/DOT administered an onboard survey to riders on every Greater Minnesota public transit system to gather data about current transit riders and better understand transit needs throughout Greater Minnesota. The survey yielded a total of 10,998 valid responses from riders of 59 systems.

Technical Analysis

Technical analysis in the Greater Minnesota Transit Investment Plan focused on satisfying the legislative mandate for calculating the level of total transit needs and the costs of meeting these needs. To arrive at these answers, Mn/DOT developed two mathematical models, one to project passenger demand (number of transit trips) and the other to project service hours needed to serve the future levels of demand. Results of the service hour model were used to calculate the future costs of providing transit.

Public Outreach

The public involvement process was a key component in the development of investment priorities. Mn/DOT employed several public involvement strategies to ensure all interested stakeholders had opportunity to comment. Additionally, the planning process focused more intensive involvement strategies on stakeholders known to have a high interest in transit investments. The state's Regional Development Commissions (RDCs) or equivalent organizations assisted in the implementation of the public involvement strategies and were instrumental in gathering comments from their communities. Regional boundaries and their county compositions are shown for reference in Figure 1.2.

Figure 1.2 Greater Minnesota Economic Development Regions

Mn/DOT conducted public outreach activities in close coordination with market research tasks. The primary public involvement strategies included structured interviews, outreach meetings and presentations, web page publications, and a public hearing.

Throughout the development of the plan, Mn/DOT presented market research, technical analysis, and public involvement findings to stakeholders. Before finalizing the plan, Mn/DOT engaged stakeholders in discussions regarding draft investment priorities. A summary document of comments received during this process is available on the [project website](#)¹.

Investment Priorities

One of the chief outcomes of this plan is a defined set of transit investment priorities, which are informed by the outcomes of the market research and technical analysis components of the plan. Stakeholder involvement played a key role in shaping the development of priorities throughout the planning process.

Investment priorities were developed to address how Mn/DOT would respond to various future funding scenarios for Greater Minnesota transit. Based on these outcomes, Mn/DOT has developed a plan for preserving existing services at current funding levels and priorities for service expansion and contraction in the event of increased or decreased funding.

¹ <http://www.dot.state.mn.us/transit/reports/investmentplan/>

Project Management and Decision-Making Process

The project management and decision-making structure for the Greater Minnesota Transit Investment Plan incorporated a Mn/DOT Project Management Team (PMT), a Plan Advisory Committee (PAC), and a Technical Advisory Committee (TAC). The PAC and TAC provided policy and technical guidance to the PMT during the development of the plan. Public outreach and opinion-gathering informed the decision-making of these groups. The commissioner of transportation is charged with submitting the Greater Minnesota Transit Investment Plan to the Minnesota Legislature.

Project Management Team (PMT)

The PMT included key Mn/DOT planning and technical staff and was responsible for managing the development of the plan and ensuring that external and internal communications provided ongoing opportunities to influence the decision-making process.

Technical Advisory Committee (TAC)

The TAC provided overall technical advisory services that guided the work of the PMT. Responsibilities included providing data, offering feedback on the plan methodology, facilitating stakeholder communications, evaluating market research, and recommending investment priorities for consideration by the PAC. The TAC was chaired by Jack Larson of Arrowhead Transit and included the members listed in Table 1.1.

Table 1.1 Technical Advisory Committee Membership

Area	Representative
District 1	Don Mohawk, District Project Manager Jack Larson (Chair), Arrowhead Transit
District 2	Kent Ehrenstrom, District Project Manager Greg Negard, Paul Bunyan Transit
District 3	Sue Siemers, District Project Manager Dave Tripp, St. Cloud Metro Bus
District 4	Keven Anderson, District Project Manager Harold Jennissen, Rainbow Rider Transit
District 6	Jean Meyer, District Project Manager Tony Knauer, Rochester Public Transit
District 7	Jan Klassen, District Project Manager Terrie Gulden, Rock County Heartland Express
District 8	Bev Herfindahl, District Project Manager Marc Hall (Vice Chair), Pipestone County Transit
Mn/DOT Office of Transit	Sarah Lenz (representative) Fay Cleaveland (staff support) John Groothuis (alternate) Becky Alper (staff support) Noel Shughart (staff support) Mike Schadauer (staff support) Judy Ellison (staff support)

Plan Advisory Committee (PAC)

The PAC was responsible for providing strategic policy guidance at key project milestones, culminating in the development of the investment priorities. The PAC considered market research findings, stakeholder comments, and technical analysis when offering policy guidance. The PAC was comprised of key stakeholders and partners, including representatives from other state agencies, local planning agencies, and public transit providers. Members of the PAC are listed in Table 1.2.

Current Level of Service

Public transportation needs in Minnesota are growing along with Minnesota’s overall population and its population of transit-dependent riders. Minnesota’s public transportation systems are growing in response to these needs. In 1990, 40 counties had some form of public transportation system; in 2009, the number of counties with public transportation systems was 76. Only four counties in Greater Minnesota currently lack some form of public transportation service, as shown in Figure 1.4 on the next page.

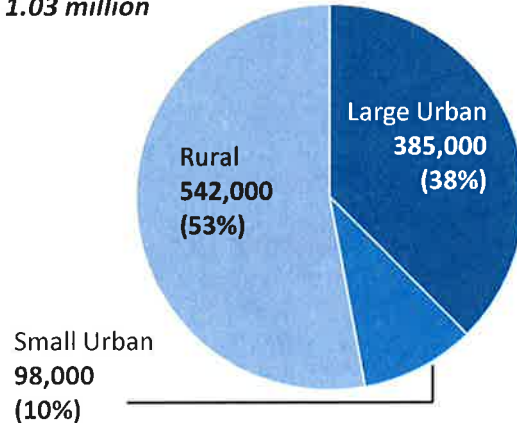

To meet transportation needs, Greater Minnesota transit systems served 11.1 million passenger trips statewide in 2009. A total of 1.03 million service hours were operated, and transit vehicles traveled 14.9 million miles to serve passenger needs. Local, state, and federal sources combined to fund transit programs at a level of \$55.3 million. Figure 1.3 details these statistics by transit system peer group.

Figure 1.3 Statewide Operating Statistics by Peer Group (2009)

Peer Groups

Within the plan’s technical analysis, systems are treated differently by peer group to account for the substantial differences in operating environments and characteristics between the various transit services throughout Greater Minnesota. For the purposes of this plan, Greater Minnesota transit systems are initially classified into three peer groups: large urban, small urban, and rural. These peer group divisions supplant the classifications used in previous Greater Minnesota transit planning efforts. The peer groups were developed based on system size, service area, and type of service provided. Systems classified in each peer group are listed in Table 1.3.

Table 1.3 Transit System Peer Groups (2010)

Peer Group	Transit Systems	
Large Urban (7 systems)	Duluth Transit Authority East Grand Forks Transit La Crescent Apple Express Mankato Public Transit	Moorhead Metropolitan Area Transit Rochester Public Transit St. Cloud Metro Bus
Small Urban (12 systems)	Albert Lea Transit Benson Heartland Express Faribault Flyer Granite Falls Heartland Express Hibbing Area Transit Le Sueur Heartland Express	Montevideo Heartland Express Morris Transit Northfield Transit St. Peter Transit Stewartville Heartland Express Winona Transit Service
Rural (40 systems)	Arrowhead Transit Austin/Mower County Area Transit (AMCAT) Becker County Transit Brainerd/Crow Wing Public Transit Brown County Heartland Express Chisago-Isanti County Heartland Express Cottonwood County Transit Dawson Heartland Express FAR North Public Transit Faribault County Prairie Express Fosston Transit Grant County Alpha Transit Hubbard County Heartland Express Kandiyohi Area Transit (KAT) Lincoln County Heartland Express Mahnommen County Heartland Express Martin County Express Meeker County Public Transit Murray County Heartland Express Paul Bunyan Transit	Pine River Ride With Us Bus Pipestone County Transit Prairie Five RIDES Praeland Transit Rainbow Rider Transit Red Lake Transit Renville County Heartland Express RiverRider Public Transit System Rock County Heartland Express SEMCAC Transportation Steele County Area Transit (SCAT) Three Rivers Hiawathaland Transit Timber Trails Public Transit Trailblazer Transit Transit Alternatives Tri-CAP Transit Connection Tri-Valley Heartland Express Bus Wadena County Friendly Rider Transit Watonwan Take Me There Western Community Transit

System performance varies greatly by peer group, as illustrated in Table 1.4. Comparing the performance of the peer groups illustrates some key challenges in providing service to the wide cross-section of transit markets in Greater Minnesota. Small urban and rural systems require less operating assistance to provide an hour of service than large urban systems. However, due to higher productivity, a large urban passenger trip can be provided for roughly half the cost of a small urban passenger trip, and about a third of the cost of a rural passenger trip. Rural systems, which serve two thirds of the total Greater Minnesota population, often travel long distances to provide a passenger trip, resulting in

higher per-passenger costs and lower productivity, as measured by passengers per service hour.

Table 1.4 Transit System Peer Group Performance Comparison (2009)

	Large Urban (Typical Range)	Small Urban (Average)	Rural (Average)
Cost per passenger	\$2.50-\$3.25	\$5.50	\$9.00
Cost per service hour	\$50-\$75	\$40	\$45
Passengers per service hour	20-24	7	5
Passenger trips per capita	20-25	5	2.5
Service hours per capita	1.0-1.2	0.8	0.4

Performance also varies widely within peer groups. Figure 1.5 shows per capita provision and consumption of service by peer group as an example of variation within peer groups. These per capita measures may be used as a key indicator of service equity throughout the state. Most rural systems (shown with circles) annually provide less than an hour of service per capita and serve fewer than five passenger trips per capita; however, some outlier systems provide more service and serve as many as 13 annual passenger trips per capita. Small urban systems (shown with diamonds) are similar to rural systems in their distribution. The seven large urban systems (shown with squares) are distributed throughout the plot, providing anywhere from 0.6 to 2 annual hours of service per capita and serving as few as 2.7 and as many as 27.5 annual trips per capita.

Figure 1.5 Performance Variation among Peer Groups (2009)

Source: Mn/DOT Office of Transit

The wide variation in performance among public transit system peer groups validates Mn/DOT’s decision to carry forward the concept of peer groups into the analysis of statewide needs.

Statewide Demographic Overview

Transit service needs will increase in the future as the population of transit-dependent Minnesotans grows. Table 1.5 and Table 1.6 detail projected changes in population by region. From 2000 to 2030, the population of Greater Minnesota is expected to increase by 32 percent—adding nearly three quarters of a million people, with the largest population gains in the Minnesota Development Regions² immediately north and northwest of the Twin Cities. In 2000, approximately 14 percent of Greater Minnesota residents were age 65 or older; by 2030, seniors will account for 23 percent of the population. In 2000, persons in poverty made up 8 to 16 percent of the regions' total populations. It is anticipated that this population will grow at about the same rate as the general population. Persons with disabilities comprise 15 to 20 percent of the total population in most Greater Minnesota regions; this group is also expected to grow at a pace similar to that of the general population.

Table 1.5 Change in Total Population and 65+ Population, 2000-2030

Region	Total Population			Population 65 and Over		
	2000	2030	Change 2000-2030	2000	2030	Change 2000-2030
1	88,472	94,030	6%	15,062	23,520	56%
2	76,161	96,920	27%	11,042	22,980	108%
3	322,073	346,880	8%	53,637	92,120	72%
4	210,059	255,180	21%	36,061	66,720	85%
5	152,100	197,380	30%	25,929	54,360	110%

Demographic Profile Findings

The demographic profile and transit service mapping exercise conducted during this planning process represented Mn/DOT's first-ever attempt at mapping all Greater Minnesota public transit services. The resulting visual representations helped stakeholders understand the great diversity of transit service needs, existing levels of service, and operating environments that exist in Greater Minnesota. The maps depicted transit services along with six demographic base layers, population density, persons in poverty, minority populations, populations with limited English proficiency, persons 65 or older, and zero-vehicle households. Mn/DOT used the maps for stakeholder discussions and displayed them at public open houses.

Two of the regional maps are presented on the following pages to show the diversity of conditions and services across the state. A map for each Minnesota Development Region can be found on the [project website](#)³.

Region 9, located in south central Minnesota, is an area representative of these vast differences. A demographic profile map showing the region's population density, key destinations, and transit services is reproduced in Figure 1.6 on the following page. The region's largest city, Mankato, has a relatively dense core area and is served by a large urban fixed-route transit system. Many of the smaller communities in the region, including St. Peter, Le Sueur, Blue Earth, and Fairmont, serve their populations with municipal dial-a-ride service. Brown, Watonwan, and Martin counties are all served by rural countywide demand-response service. A network of rural route service connects smaller communities to key destinations in Fairmont, Blue Earth, New Ulm, and other towns. Region 9 also includes Waseca County, one of the four Greater Minnesota counties currently unserved by any kind of public transit service.

Region 3 is located in northeast Minnesota, and exhibits a very different variety of transit services. The region includes the Duluth Transit Authority, which carries more than a quarter of all Greater Minnesota transit passenger trips. In addition, each of Region 3's seven expansive counties is served by some type of transit service operated by Arrowhead Transit. The region's extensive network of rural community-to-community routes connects people from across the Arrowhead to key destinations in the Duluth area, as well as the Iron Range towns of Grand Rapids, Hibbing, and Virginia. Figure 1.7 contains a demographic profile map showing Region 3.

Transit Funding Sources

The Mn/DOT Office of Transit is responsible for the administration of state and federal transit assistance funds for Greater Minnesota. Public transportation programs in Minnesota are funded through a federal-state-local partnership. When state and federal funds are adequate, local sources pay a maximum share of the total operating costs, either 15 or 20 percent, depending on the type of service operated. During some recent years the available state and federal funds have not been sufficient to fully fund service at the legislative targets of 80 and 85 percent. Local systems have the option to fund additional transit service beyond their 15 to 20 percent requirement when that is the case.

Public transit operations in Minnesota are supported at the state and federal level from a variety of sources. A major source of state funding is the Motor Vehicle Sales Tax (MVST), which collects revenues from automotive sales and directs up to 40 percent of these funds towards transit assistance. Currently, Greater Minnesota transit’s share of MVST revenue is set at 3.75 percent. This share will increase to 4 percent in State Fiscal Year 2012. Other funding for public transit systems in Greater Minnesota has historically come from appropriations from the state’s General Fund. Funding from the Federal Transit Administration through operating and capital programs forms the remainder of Greater Minnesota’s public transit budget.

Funding sources for Greater Minnesota transit operations for 2005 through 2009 are shown in Figure 1.8. In 2009, the distribution of operating funding was as follows:

- General Fund – 29%
- MVST – 26%
- Federal funds – 19%
- Local funds – 26%

Figure 1.8 Greater Minnesota Transit Operating Funding Sources, 2005-2009

Chapter 2: Market Research

At the outset of the planning process, Mn/DOT and its RDC partners undertook two extensive market research tasks to better understand the needs of current and potential Greater Minnesota transit customers. Market research consisted of a statewide survey of current transit users and a set of focus groups held to consult with people who do not currently use transit. The goal of conducting these tasks was to obtain a reliable and valid base of information to feed into development of investment priorities. The results of the onboard survey and focus groups provided a foundation from which Mn/DOT could conduct technical analysis and draft its investment priorities.

Onboard Surveys

Mn/DOT developed an onboard rider survey to be administered on each public transit system in Greater Minnesota, with the goal of using transit riders' input to better understand statewide transit needs. The onboard survey was conducted in March, April, and May 2010, during which a total of 10,998 riders of 59 public transit systems responded to the survey. The key findings are documented in this plan, and a complete report of survey findings is available on the Greater Minnesota Transit Investment Plan [website](#)⁴.

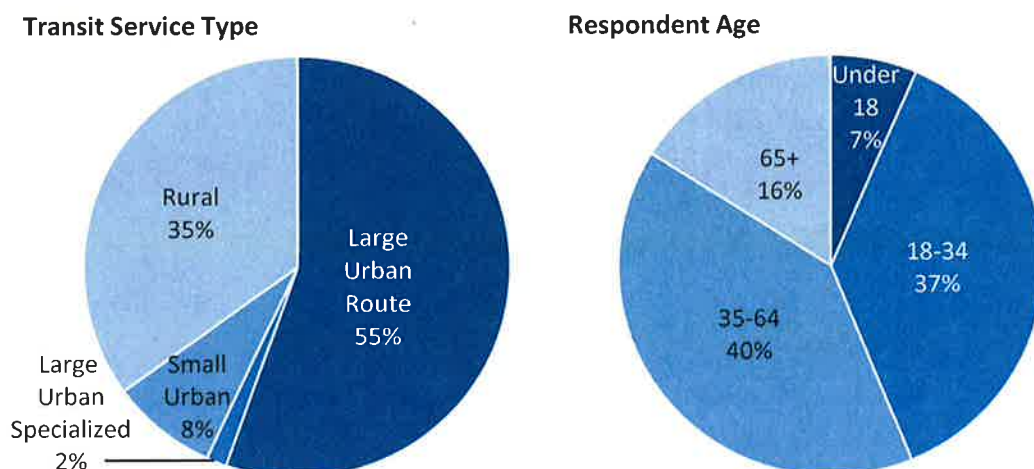

Respondent Profile

The survey asked a number of questions about demographics and personal attributes to learn more about who uses transit in Greater Minnesota. The two most important differentiators of survey respondents' transit behaviors and opinions are the type of transit system used and the age of the respondent. Figure 2.1 illustrates the distribution of respondents by these two characteristics. Over half of respondents are users of large urban services (including fixed-route and elderly and disabled services), while about 35 percent use rural services and the remaining 8 percent use small urban systems. Seventy-seven percent of respondents are between the ages of 18 and 64, while 16 percent are older than 64 and 7 percent are younger than 18.

Sixty percent of respondents are female and 40 percent are male. Survey respondents skew strongly toward lower income households, with 63 percent of respondents reporting household income of less than \$20,000. An estimated five of six respondents are below the Greater Minnesota average household income of about \$45,000.

⁴ <http://www.dot.state.mn.us/transit/reports/investmentplan/>

Figure 2.1 Survey Respondents by Transit Service Type and Age

Because Mn/DOT has recently begun to monitor trends related to populations with limited English proficiency, the survey asked respondents about their language. English is the first language for 93 percent of respondents. Among those for whom English is not the first language, 96 percent said they understand English very well or well. Transit riders are more ethnically diverse than the population as a whole. Seventy-nine percent of respondents are white; in comparison, approximately 95 percent of the general population of Greater Minnesota is white.

Respondents were also asked about other characteristics associated with transit use. Fifty one percent of respondents do not have a driver’s license. Twenty percent have an impairment or disability that requires assistance in riding transit. Four percent of respondents are disabled veterans who are entitled to free rides on fixed-route systems. Nearly 14 percent of respondents from large urban elderly and disabled services are disabled veterans, while the percent of respondents who are disabled veterans from the other transit system types range from 3.4 percent on large urban route service to 4.4 percent on rural services.

Transit Behaviors

During their sampled trips, one third of respondents were riding to work and one in five to school, for a total of 53 percent for these two most common destinations. Seventeen percent were traveling to shopping, 13 percent to a medical appointment, and 8 percent to a social engagement. The remaining nine percent of respondents were traveling to a variety of destinations that were not statistically significant.

A total of 53 percent were riding transit either because they do not have a car or because they do not drive. Another 4 percent do not like to drive. Fourteen percent were riding transit because it saves money, 8 percent because it saves time, and 6 percent because it is better for the environment. The remaining 15 percent of respondents rode transit for a variety of reasons that were not statistically significant.

More than half of respondents ride transit at least five days a week, and 86 percent ride at least twice a week. One in four has been riding transit for less than one year. This

indicates that many users are brand new to transit, requiring systems to continually update marketing information.

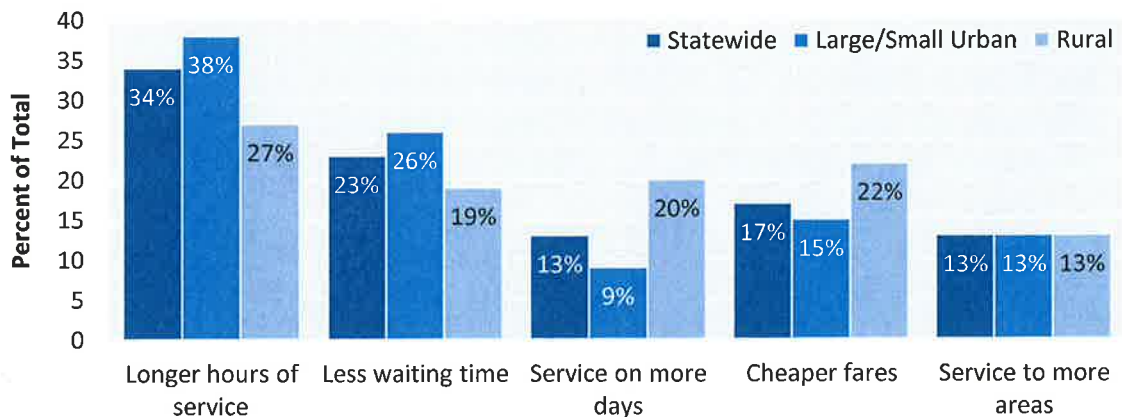

Attitudes and Opinions

The survey asked respondents how satisfied they were with the availability of transit within their community. Sixty-nine percent are very satisfied with their transit service, 27 percent are somewhat satisfied, and 4 percent are not very satisfied or not satisfied at all. Riders age 65 and over are most likely to be very satisfied with their transit service (85 percent). African-Americans are least likely to be very satisfied (56 percent). Still, more than half of every age and ethnic group reported themselves as “very satisfied” with their transit service. The level of satisfaction with transit service seems to be related to whether one has a car and/or a driver’s license. If one has no other mobility option, then the level of satisfaction is generally higher. Those who drive a car are more likely to compare their transit service to the mobility they experience with their car, and find transit to be wanting. These people are more likely to ride transit because it saves time or money.

One of the onboard survey’s key goals was to gauge the level of needs being met by current transit services. Respondents were asked “What percent of your transportation needs are served by the bus?” The average Greater Minnesota transit user reported 67.7 percent of needs being met. This finding is used later in the plan’s technical analysis to help determine the level of unmet needs across the state. The level of needs being served varied little across the transit system peer groups, suggesting that there are sizable unmet needs for transit throughout the state.

Respondents were also asked what potential changes to transit service would be most valuable to them. Figure 2.2 illustrates the results. A total of 70 percent of respondents preferred improvements related to the time service is available, through longer hours of service, less waiting time between buses, and service on more days of the week.

Figure 2.2 Survey Respondents’ Preferred Improvements to Transit Services

Only riders of large urban elderly and disabled services did not list longer hours of service as one of their top two changes. Riders of large urban elderly and disabled

services and respondents with household incomes greater than \$50,000 rated less waiting time as their first choice for improvement.

Differentials by Transit System Type

Respondent characteristics from each transit system peer group vary from the statewide aggregate. The peer groups include **large urban** (both fixed-route and elderly and disabled services), **small urban** route deviation and on-demand services, and **rural** route deviation and on-demand services.

- **Large urban fixed-route** service users are younger, ride more frequently, are more likely to ride to work or school, and do so on a more discretionary basis, as they are more likely to have a car and a driver's license. They are more likely to prefer receiving transit information via email or a website.
- **Large urban elderly and disabled service** riders are much older, ride less frequently, are more likely to ride to medical appointments, and are less likely to have a car and a driver's license. They are three times more likely than the statewide aggregate to report having limited physical mobility and/or need assistance in riding transit. They report the highest percentage of transportation needs being met by their transit service (73.2 percent versus 67.7 percent statewide). Their preferred transit enhancement is less waiting time, and they prefer to receive transit information via direct mail.
- **Small urban** riders are older, ride less frequently, are more likely to ride to shopping, and are less likely to have a car and a driver's license. They resemble the statewide aggregate on most other dimensions.
- **Rural** service users are older and more likely to ride to work, but they ride less frequently. They are also more likely to ride to medical appointments and shopping. They are less likely to have a car and a driver's license. They are more likely to prefer receiving transit information via direct mail.

Differentials by Age

After transit system type, age is the greatest differentiator of characteristics and opinions among Greater Minnesota transit customers.

- **Riders under 18** are most likely ride to school and do so more than twice a week. They are more likely to want cheaper fares, but household income is highest for riders under 18 than for any age group.
- **Riders age 18-34** mostly ride to work or school, and 92 percent ride more than twice a week.
- **Riders age 35-64** mostly ride to work, and 90 percent ride more than twice a week. Almost half have ridden public transit for more than five years.

- **Riders age 65 and over** ride less frequently and are more likely to ride to shopping (33 percent) and medical appointments (29.5 percent). More than 40 percent have ridden transit for five years or more. Transit ridership becomes less gender-diverse with age; riders age 65 or over are 76 percent female. Riders over 65 are also less racially diverse than the statewide aggregate.

Focus Groups

Focus groups were held in March and April 2010 to consult with non-users of public transit and gather perceptions of transit services and transit need among this group. Each RDC was responsible for conducting one focus group in its region, for a total of 12 sessions statewide. RDCs used their existing networks to identify and invite 10 to 12 participants. RDCs screened invitees to ensure they were not regular transit riders and were not employed by a stakeholder agency, e.g. transit provider, RDC, local politician, etc. Focus group membership included representation from seniors, persons with low incomes, minorities, and persons with disabilities.

Focus group discussions focused on four themes: current traveling experiences, transit perceptions, marketing, and future alternatives. Comments were generally consistent throughout the state with few differences between regions. Discussions of each theme are summarized in the following sections.

Current Traveling Experiences

- **Use of personal vehicles.** The majority of participants used their own vehicles for their daily trips. Many had never used or thought about taking public transit.
- **Types of trips.** Types of trips varied by demographic group. Those with children noted an increased number of trips per day due to children's activities. Retired participants noted inconsistent schedules and multiple trips per day for recreation and volunteer purposes.
- **Knowledge of transit service.** Knowledge of existing services varied by area. In some areas, like Bemidji, there was widespread knowledge of transit services and how they worked. In other areas, there was little to no knowledge.

Transit Perceptions

- **Convenience.** The majority of participants do not use transit because it is inconvenient (e.g. does not go where they need to go, long travel times, long wait times).
- **Independence.** Many participants noted they like their independence and transit is an impediment.
- **Who transit service is for.** There were many comments that participants did not know services were available to the general public and thought transit service was only for the elderly and disabled. Others felt that only those that need it should use it.

- **Weather.** Participants often used weather as a reason for not using transit, not wanting to wait outside in the cold or the difficulty of maneuvering sidewalks with large snow banks.
- **Personal safety.** Some participants noted personal safety as a reason for not using transit. Others noted child safety as a reason for not using public transit, for example lack of seat belts.
- **Waste of money/use of service.** Some participants had seen partially full or nearly empty buses and viewed this service as a waste of money.
- **Cost of fares.** This was not considered as a barrier to using transit. Most that had knowledge of fares thought they were reasonable.

Marketing

- **Increased promotions.** The majority of participants felt that additional promotions were needed on the services available.
- **Incentives to ride.** Many participants noted that incentives to ride would increase transit usage. Examples included free service days, discounted passes, or free passes for students. While many suggested incentives, not all indicated that such incentives would increase their likelihood to use transit.
- **Where users get information.** Many participants indicated they would use the phone book to get information on local transit services. Other options included the internet, brochures, and flyers in the community.
- **Where systems offer information.** Most participants felt that information should be placed on bulletin boards throughout the community, in locations such as grocery stores, churches and senior centers.

Future Alternatives

- **Increased use “in the future.”** Many participants noted they could see an increased use of transit “in the future.” Some noted just a general increase in use, and some noted they would use it themselves. Reasons for increased use included aging, high fuel prices, increased vehicle ownership costs, and lack of parking.
- **Efficiency of service.** Many participants noted a need for increased efficiency of service. This included shorter trips, fewer stops, shorter wait times, express bus lanes, and coordinated services with community organizations and businesses.
- **Expansion of service.** Many participants noted a need for increased services, such as weekend and evening hours, increased service area, and fixed-route service versus dial-a-ride.

Chapter 3: Technical Analysis

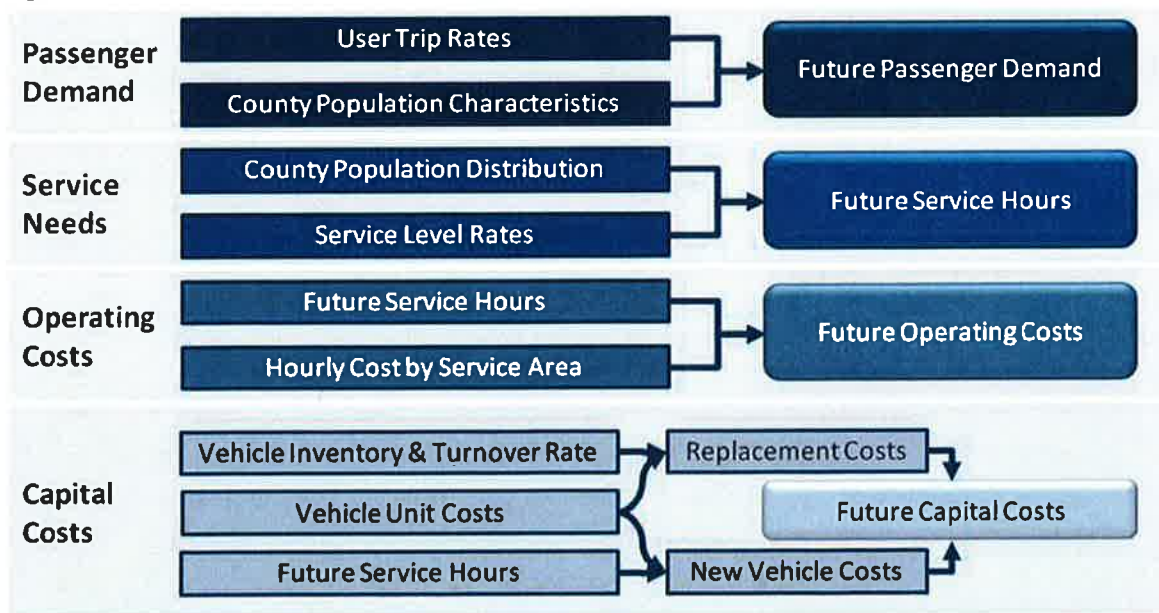

Technical analysis within the Greater Minnesota transit plan addresses five components that affect future transit service provision:

- **Passenger demand** estimates project how many transit trips Greater Minnesota residents will need to make in the future
- **Service level** estimates determine how many hours of service transit providers will need to operate to meet demand levels
- **Operating cost** estimates gauge how much the additional service will cost to provide
- **Capital cost** calculations address costs of replacing existing transit vehicles and purchasing new vehicles to provide additional service
- **Future revenues** provide a framework to understand funding for transit services

Market research and public outreach findings are incorporated in the technical analysis methodologies. The analysis results are used to better understand the size of the investment gap between current transit services and projected needs, and to guide potential investment strategies for future services.

In order to better understand total transit service needs in Greater Minnesota, Mn/DOT developed models to estimate future transit needs in terms of both passenger demand and service hours. Unit costs and inflation factors are applied to these future transit need projections in order to estimate the operating and capital funds needed to fully meet future transit needs in Greater Minnesota. Figure 3.1 illustrates the model methodology.

Figure 3.1 Technical Analysis Methodology

Passenger Demand Estimation

Demand estimation techniques often form the basis for establishing transit needs. Several models have been developed in other states to estimate transit demand; however, no one method fits all geographies. After reviewing existing models for estimating transit needs, Mn/DOT determined that an alternative approach was needed for the Greater Minnesota Transit Investment Plan. The Minnesota Hybrid Demand Model was developed for this plan using portions of models used in other states to better reflect the diversity of transit services and service areas found across Greater Minnesota. The Minnesota Hybrid Demand Model estimates demand using two basic components:

- All Greater Minnesota counties have a base level of public transit demand that can be adequately represented by applying specific trip rate factors to transit-dependent populations of seniors, persons with disabilities, and low-income persons.
- In counties with a large urban center (population above 50,000), an additional component of transit demand is incorporated to account for expanded markets of commuters, students, and general travelers. Other select counties with special service conditions also exhibit a high level of need that exceeds the base level represented by the first model component. Current services in these locations serve unique user groups, such as college/university students or other unique travel markets.

Each component of the model was calibrated using transit trip rates factored to represent the 100th percentile of per capita passenger trip rates found across all Greater Minnesota transit systems in 2009. In addition, trip rates were factored to represent the levels of need currently being met in large urban areas and select counties with special service conditions, according to 2008 utilization data from Mn/DOT and the results of the onboard user survey. Future year total county projections shown in Table 3.1 on the following page were combined with elderly population projections to form the basis for future year demand estimates. This information is provided by the Minnesota State Demographer⁵. Additional information on persons with disabilities, low-income populations, and zero-car households is based on the 2000 U.S. Census.

The model is detailed in Figure 3.2.

Figure 3.2 Minnesota Hybrid Model for Passenger Demand Estimation

		4.2 X	Population 65 years or older
	+	15.0 X	Population with disabilities under 65 years
Annual Demand by County =	+	7.0 X	Low-income, non-disabled population under 65 years
	+	3 x 365 x P X	Zero-vehicle households in counties with major urban centers and special service conditions counties
			<i>(Fixed-route Factor "P" varies by urban center or county to calibrate to current demand, and ranges from 20 to 50%)</i>

⁵ Detailed projections can be viewed in a technical memorandum on the project website at <http://www.dot.state.mn.us/transit/reports/investmentplan/>

Figure 3.3 provides an illustrative example of the demand model application for County A, a hypothetical county with population characteristics as shown in Table 3.2.

Table 3.2 Hypothetical County A Population Characteristics

	Year 2000	Year 2030
Total population	55,000	65,000
Population age 65 or older	6,500	10,500
Low-income population	12.7%	12.7%
Population with disabilities	14.6%	14.6%
Zero-vehicle households	2.7%	2.7%

Figure 3.3 Hypothetical County A Year 2030 Estimated Passenger Demand

	4.2	X	6,500	persons age 65 or older (year 2030)
+	15.0	X	9,455	persons with disabilities under 65 years (year 2030)
+	7.0	X	8,273	low-income, non-disabled persons under 65 years (year 2030)
+	3 x 365 x 20%	X	1,733	zero-vehicle households (year 2030)
=	606,563 annual one-way transit trips in 2030			
<i>(Fixed-route Factor P_{County A} = 20%)</i>				

Transit need estimates were developed for each of Greater Minnesota’s 80 counties with the method illustrated above and aggregated to produce a statewide total. The result is an estimate of total transit service needs in Greater Minnesota, measured in annual one-way passenger trips potentially using public transit. The calculations account for the needs of all Greater Minnesota residents, including persons with disabilities. Statewide passenger demand estimates are shown in Figure 3.4.

Figure 3.4 Statewide Total Annual Estimated Passenger Demand

In 2009, the level of passenger demand met was 11.1 million annual trips, representing 61 percent of 2010 projected demand.

Service Level Estimation

Service hours are used to establish transit service level needs. In order to produce future transit service hour estimates for Greater Minnesota, Mn/DOT developed the Minnesota Service Hours Model. The primary inputs for the model are current service levels, current county population estimates, and future county population projections. To develop the service hour projections, annual per capita service hour target rates for the county population within each transit peer group, shown in Table 3.3, were applied to the future population of each county. The medium-sized urban area peer group was added for this analysis to account for significant differences in current amounts of per capita service provided.

Table 3.3 Service Hours per Capita Target Rates by Peer Group

Peer Group	Target Rate
Large urban (Duluth, Rochester, St. Cloud)	1.50-1.75
Medium urban (Moorhead, Mankato, La Crescent, East Grand Forks)	1.00
Small urban	0.75
Rural – High service level	0.75
Rural – Low service level	0.50

Target rates of service hours per capita were selected as the best way to project standardized service levels across the state. The rates are based on current statewide peer group averages and the percent of needs currently being met according to the onboard survey results. For each county, transit peer group target rates were applied to the population segments they serve. County populations were allocated into the following segments:

- Urban (for counties that contain the cities of Duluth, Rochester, St. Cloud, Moorhead, Mankato, La Crescent, and East Grand Forks)
- Cities over 10,000 (not including cities in the urban category)
- Rural (includes cities under 10,000)

For initial model setup, 2008 county-level service hours targets were applied to the total county population to derive a county-specific service hours per capita target rate. To develop future service hours projections, the county-specific service hours per capita target rate was applied to future population estimates provided by the State Demographer. The complete service hours model is illustrated in Figure 3.5.

Figure 3.5 Minnesota Service Hours Model

	Large Urban Segment	X	Large Urban Target Rate
	+ Medium Urban Segment	X	Medium Urban Target Rate
	+ Small Urban Segment	X	Small Urban Target Rate
	+ Rural (High Service Level) Segment	X	Rural Target Rate
	+ Rural (Low Service Level) Segment	X	Rural Target Rate
	= + Special Consideration Segment	X	Special Consideration Target Rate
Current (2008) Service Hours by County			
Service Hours Per Capita Target Rate	=	$\frac{\text{Current Service Hours by County}}{\text{Current County Population}}$	
County Future Service Hours	=	Future Population Projections	X Service Hours Per Capita Target Rate

Figure 3.6 provides an illustrative example of the service hours model application for County B, a hypothetical county with population characteristics as shown in Table 3.4.

Table 3.4 Hypothetical County B Population Distribution

	Year 2010	Year 2030
Total population	60,000	75,000
Large urban population	30,000	--
Small urban population	20,000	--
Rural population	10,000	--

Figure 3.6 Hypothetical County B Year 2030 Estimated Service Hour Needs

Current Annual Service Hours	=	30,000 large urban population	X	1.50	=	45,000
		+ 20,000 small urban population	X	0.75	=	15,000
Target		+ 10,000 rural population	X	0.50	=	5,000
					=	65,000 current annual service hours
Service Hours Per Capita Target Rate	=	65,000 current annual service hours			=	1.08 service hours per capita
		60,000 total current population				
2030 Service Hours	=	75,000 total persons (2030)	X	1.08 service hours per capita	=	81,200 service hours

Service level estimates calculated for each county and aggregated at the statewide level. Statewide service level estimates are shown in Figure 3.7.

Figure 3.7 Annual Service Hours Needed to Fully Meet Passenger Demand

The level of service provided in 2009 was 1.03 million statewide service hours, representing 57 percent of 2010 projected service hour needs.

Current Service Gap

According to Mn/DOT, the total number of passenger trips served in 2009 was 11,056,833 and the actual number of service hours operated was 1,025,425. Based on the demand estimates conducted as part of this analysis, 2009 services met approximately 61 percent of passenger demand and 57 percent of projected service hour needs statewide. This differs slightly from the results of the onboard survey, which indicate about 68 percent of transit needs being met in areas where public transit services are currently available. The slight difference in needs met is attributable to the cities and counties that do not currently have any public transit service in operation. Table 3.5 includes a comparison of the actual versus projected 2010 need (passenger demand and service hours).

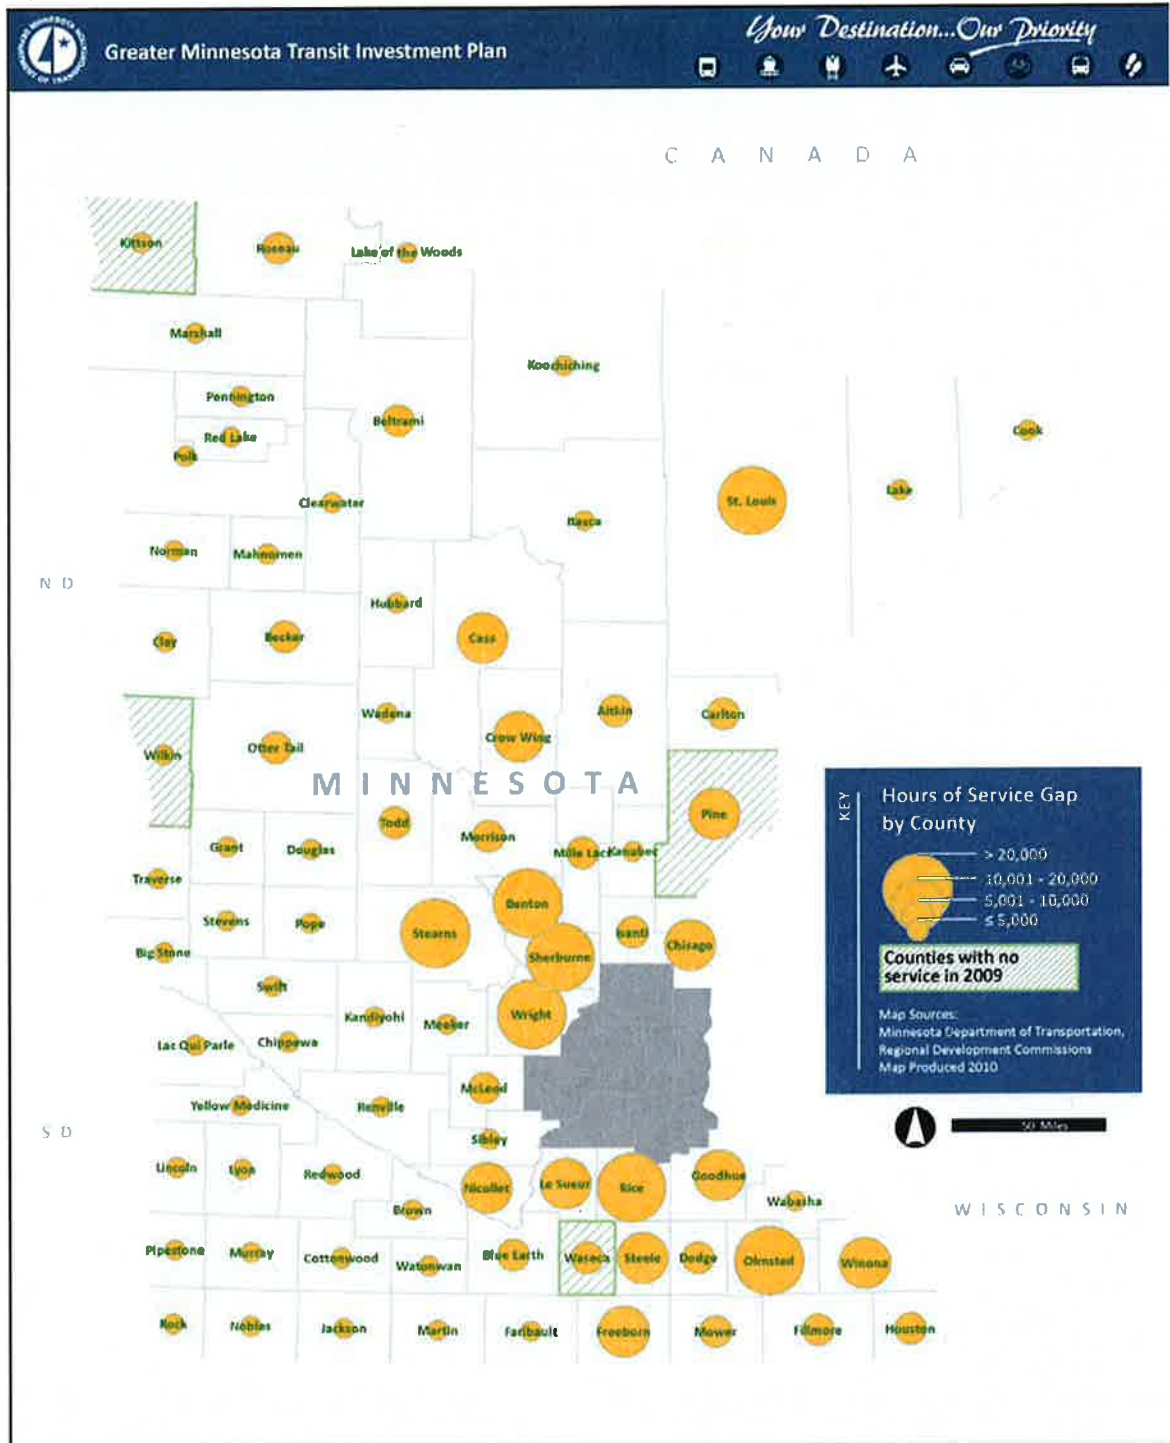

Table 3.5 2010 Statewide Service Gap

	Actual (2009)	Projected (2010)	Gap	Percent of Total Projected Need Served
Passenger demand	11,056,833	18,132,000	7,075,167	61%
Service hours	1,025,425	1,836,000	810,575	57%

Figure 3.8 on the following page shows the service hour gap by county. The information depicted in the figure is also included in tabular form in a technical memorandum available on the [project website](#)⁶.

⁶ <http://www.dot.state.mn.us/transit/reports/investmentplan/>

Figure 3.8 Current (2010) Gap in Service Hours

Operating Costs

In order to guide potential investment strategies for future services and to better understand the size of the investment gap between current transit services and projected needs, Mn/DOT developed a model to estimate the cost to meet future transit needs in Greater Minnesota. The primary inputs for the cost model are the future service need estimates (service hours) developed as part of this analysis and current operating expenses per service hour. To develop the cost estimates, an average expense per hour rate for transit system peer groups was applied to the future service hours for each county and adjusted for inflation, assuming costs will increase at 2.85 percent per year. The hourly rates for each peer group are presented in Table 3.6.

Table 3.6 Operating Cost Hourly Rates by Peer Group

Peer Group	Average Cost per Hour (2009 dollars)
Large urban	\$70.10
Medium urban	\$65.70
Small urban/rural	\$45.20

Projected total annual operating costs are shown for future years through 2030 in Figure 3.9.

Figure 3.9 Annual Operating Cost of Fully Meeting Future Service Needs

The total operating cost for services in 2009 was \$55.3 million.

Operating Revenues

Projected state and federal Greater Minnesota public transit operating revenues through 2015 are illustrated in Figure 3.10.

Figure 3.10 Projected State/Federal Greater Minnesota Transit Operating Revenues, 2010-2015

Sources: Mn/DOT Office of Transit, MMB November 2010 MVST Forecast

It is projected that total transit operating revenues from state and federal sources will decline in 2011, and then grow to \$55.6 million in 2015.

Capital Costs

Capital cost estimates include vehicle replacement costs for existing services and costs of purchasing new vehicles required to serve future needs.

Vehicle Replacement

Fleet replacement costs are a product of vehicle cost and service life, both of which vary considerably according to vehicle type. To maintain a safe and viable transit system, it is assumed that a certain percentage of each system's fleet must be replaced annually. Vehicle fleet replacement costs are calculated by applying vehicle turnover rates to vehicle unit costs and current fleet size. Inflation-adjusted fleet replacement costs required to maintain existing systems annually through 2015 and in five-year increments through 2030 are presented in Table 3.7 and Table 3.8. System needs are grouped into large/medium urban and small urban/rural classifications to reflect current fleet composition.

Table 3.7 2011-2015 Annual Fleet Replacement Cost (in millions)

Year	Large/Medium Urban	Small Urban/Rural	Annual Total
2011	\$4.3	\$5.2	\$9.5
2012	\$4.4	\$5.3	\$9.7
2013	\$4.5	\$5.5	\$10.0
2014	\$4.7	\$5.7	\$10.4
2015	\$4.8	\$5.8	\$10.6

Table 3.8 2011-2030 Vehicle Replacement Costs in Five-Year Increments (in millions)

Years	Large/Medium Urban	Small Urban/Rural	Five-Year Total
2011-2015	\$22.7	\$27.5	\$50.2
2016-2020	\$26.2	\$31.7	\$57.9
2021-2025	\$30.2	\$36.5	\$66.7
2025-2030	\$34.6	\$42.0	\$76.6

New Vehicle Requirement

New transit vehicles are needed to meet current and projected future service needs in both unserved and underserved areas. New vehicle needs are projected using a model based on the results of the Minnesota Service Hours Model (see Figure 3.5). The primary inputs for the capital cost model are the estimated service hours to meet the needs targets, current service hours, transit vehicle unit costs, and the average annual service hours per transit vehicle. Figure 3.11 summarizes the capital cost model for new vehicles.

Figure 3.11 Capital Cost Model for New Vehicle Requirement

$$\begin{aligned}
 \text{Target Year Capital Cost} &= \text{Vehicle Unit Costs (Table 3.9)} \times \text{Target Year Vehicle Fleet Gap by Population Segment} \\
 \text{Target Year Vehicle Fleet Gap by Population Segment} &= \frac{\text{Target Year Service Hours Gap} \times \text{Representative Population Segment Distribution}}{2,500 \text{ (average annual service hours per vehicle)}}
 \end{aligned}$$

The average annual service hours per transit vehicle (2,500 hours) was applied to the service hours gap for the population represented by each transit system peer group in each county to derive the additional vehicle fleet needed to meet unmet service needs. A vehicle unit cost was then applied to develop the estimated capital cost of meeting each target. The Greater Minnesota transit fleet consists of vehicles from three different classes, ranging from low-capacity cutaway buses to heavy duty, high-capacity fixed-route buses. Table 3.9 lists the estimated 2010 vehicle unit costs by class and the population segment typically served by each.

Table 3.9 Vehicle Unit Cost by Class

Vehicle Class	Population Segment Served	Estimated Vehicle Cost (2010)
600/700 (high-capacity)	Urban	\$305,000
500 (mid-capacity)	Small urban (cities over 10,000)	\$114,000
300/400 (low-capacity)	Rural	\$66,000

Unit costs are increased by 2.85 percent annually for future year estimates to account for inflation. The total vehicles and related capital cost required to meet 100 percent of needs are summarized in Table 3.10. These costs are incurred in addition to the ongoing fleet replacement costs.

Table 3.10 Capital Cost of Additional Vehicles Required to Meet 100 Percent of Future Needs

	2010	2015	2020	2025	2030
Total new vehicles required	297	53	36	32	26
Class 600/700	49	9	6	6	5
Class 500	48	9	6	5	4
Class 400	200	35	24	21	17
Total cost (adjusted for inflation)	\$33.6 million	\$6.9 million	\$4.3 million	\$4.6 million	\$4.4 million

The 2010 additional vehicle capital cost value represents the fleet required to fully close the service gap from current levels of service. Values in subsequent years represent the fleet required to meet new levels of service to serve expanding transit need.

Sources of Capital Funding

Capital funding sources for Greater Minnesota transit vehicles include Federal 5307 Formula Funds, Federal 5309 Discretionary Funds (Competitive Funds), and Federal Highway Administration Flex Funds. Of these, Federal Highway Administration Flex Funds are the primary funding source for maintaining the Greater Minnesota transit capital program. The current capital funding level from these funding sources allows Greater Minnesota transit systems to meet the majority of their existing capital needs.

Chapter 4: Public Involvement

Mn/DOT was committed to integrating public involvement into decision-making throughout the Greater Minnesota Transit Investment Plan process. Pairing public involvement techniques with the results of market research and technical analysis helped Mn/DOT gain an understanding of existing transit service needs and informed the development of the plan.

The goals of the public outreach program included the following:

- **Creating early and continuous opportunities for involvement.** Mn/DOT conducted two rounds of outreach meetings at key points in the plan.
- **Providing timely information about the plan development.** Mn/DOT regularly briefed stakeholders on plan progress and maintained current information for public consumption on the project website. RDCs conducted over 50 stakeholder presentations throughout the state, engaging the public in dialogue about investment priorities.
- **Reaching a diverse set of stakeholders.** Together with its RDC partners, Mn/DOT included a wide array of stakeholder voices in the planning process. Mn/DOT targeted transit-dependent populations, including persons with disabilities, seniors, minorities, and persons with low incomes for participation in market research and public outreach presentations.
- **Seeking review and comment at key decision-making points.** Before finalizing the plan, Mn/DOT held public open houses and engaged stakeholders in extensive discussions regarding draft investment priorities.
- **Integrating public comment and market research into the decision-making process.** Feedback from the project stakeholder committees directly affected the planning process. In addition, Mn/DOT used the findings of structured interviews as an input to technical analysis.

The specific involvement strategies employed during the plan included structured stakeholder interviews, outreach meetings and presentations, public open houses, web page publications, and a public hearing.

Structured Interviews

The purpose of the structured interviews was to engage stakeholders in an in-depth discussion regarding investment priorities in cases of increased and decreased funding scenarios.

A total of 24 structured interviews were conducted with key stakeholders from across the state to test validity of Greater Minnesota transit investment priorities. Questions focused on investment priorities for rural versus urban areas, availability of services, cost-effectiveness, service investment priorities, expansion of fixed-route service versus dial-a-ride, marketing, and pricing of transit services.

Participants represented the following groups:

- Veterans services
- Chambers of commerce
- Key destinations
- Social services
- Senior services
- Health care organizations
- Minority organizations
- Citizens

Participants represented organizations/citizens from across Greater Minnesota. The following geographic areas were represented:

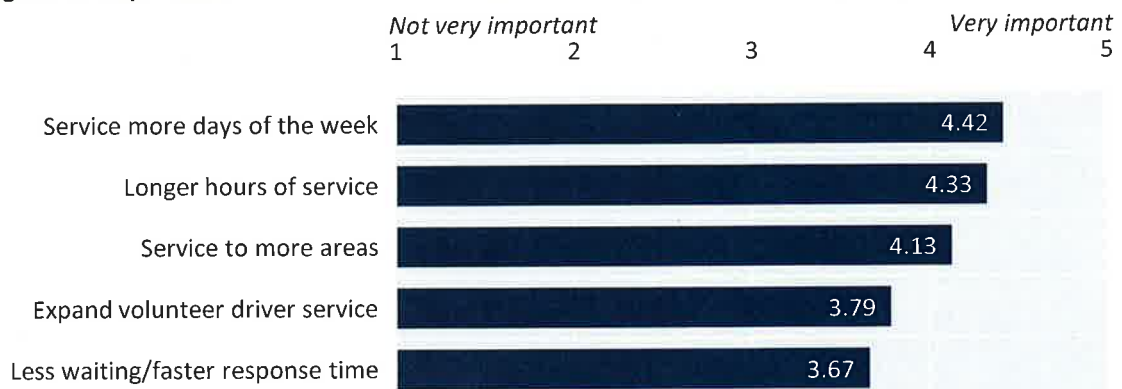

- Statewide
- Southwestern Minnesota
- West Central Minnesota
- Southeastern Minnesota
- Northwestern Minnesota
- St. Cloud area
- Duluth area
- Wadena area
- Brainerd Lakes area
- Mankato area
- Fargo/Moorhead area
- Bemidji area
- Aitkin County
- Blue Earth County
- Carlton County
- Chisago County
- Isanti County
- Kanabec County
- LeSueur County
- Mille Lacs County
- Pine County
- Renville County
- Waseca County

The following key themes emerged from the structured interviews:

- **Rural vs. urban.** The majority felt that expanding service in rural Minnesota is an important investment priority, as the need for access to services is significant. Others felt that investments should be made in growing urban areas where systems provide the most rides.
- **Availability of service.** The majority felt that transit should be available to every Minnesotan, although concerns about the feasibility and cost of doing so were noted by some.
- **Cost-effectiveness.** Many respondents felt that cost-effectiveness was a good measure for determining investment priorities, while others felt that it should not be the only criterion evaluated.
- **Fixed-route vs. dial-a-ride/on-demand.** Dial-a-ride or on-demand service was more preferred than fixed-route service.
- **Marketing.** A need for increased marketing was noted by most respondents. Several respondents noted that collaboration with community organizations and alternative marketing tactics were needed.

- **Fare price.** The majority of respondents did not feel that fare price was a barrier to transit use. Other barriers, such as availability, awareness, and connectivity, were noted.
- **Investment priorities.** Service expansions in terms of days of the week, service hours, and areas served were most important to interview participants. Participants were asked to state the importance of five expansion options on a scale of 1 to 5, with 1 being the least important and 5 being the most important. Results are shown in Figure 4.1.

Figure 4.1 Importance of Potential Transit Improvements (Interview Participants)

Outreach Meetings and Presentations

RDCs or equivalent organizations each held outreach meetings and gave presentations to interested organizations in their communities. Over 50 stakeholder presentations were given throughout Greater Minnesota. The presentations provided an opportunity to share information on key elements of the plan as well as provided an opportunity for in-depth dialogue. Participants were not only encouraged to comment orally, but also to provide written comment on comment cards. Throughout the development of the plan, approximately 300 comment cards were collected. Some highlights from the comments received are:

- Providing service in more areas is the most important priority for expansion.
- Providing longer hours of service and service more days of the week are also high priorities.
- Transit services need to be marketed to potential customers so that people know what services are available in their communities.
- Rural areas need transit services and must not be penalized for low passenger volumes.

Public Open Houses

Each RDC held an open house to present technical analysis findings to the public and review draft investment priorities. Open houses were widely publicized and held in transit accessible locations. Attendees provided generally positive feedback on the investment priorities.

Web Page

Mn/DOT dedicated a page on its website to provide current information on the Greater Minnesota Transit Investment Plan. Mn/DOT used the web page as a repository for results of market research, technical analysis, and public outreach processes. Notices for stakeholder participation opportunities were also posted on the web page.

Public Hearing

Mn/DOT held a public hearing on the draft Greater Minnesota Transit Investment Plan on January 19, 2011. The hearing was held via video conference at all Mn/DOT district offices and via web-based Adobe Connect software to encourage participation from all geographic areas. Key themes from the comments included:

- The need for increased transit funding to ensure transit needs are met statewide.
- The importance of transit services in helping seniors live at home, especially in rural areas.
- The need for increased coordination among transportation services.

Chapter 5: Summary of Needs

The market research, technical analysis, and public outreach undertaken during the course of this planning process underscore the fact that there is not one simple way to calculate statewide transit needs. Due to the diversity of areas served by public transit and the mix of users in Greater Minnesota, transit means different things to different stakeholders and perceptions and expectations of transit service will continue to vary in the future. Using market research as a baseline, the mathematical models developed in this plan have yielded a reasonable foundation for quantifying Greater Minnesota’s transit needs and costs in future years, which can be used to shape priorities and direct resources toward filling the current gaps in transit service.

Response to Legislative Targets

The Minnesota State Legislature required this plan to identify the capital and operating costs necessary to meet 100 percent of total transit service needs for 2010, 2015, 2020, 2025, and 2030. These needs and costs are shown in Table 5.1.

Table 5.1 Summary of Future Needs and Costs (100-percent level), 2010-2030

	2010	2015	2020	2025	2030
Total Passenger Demand (millions of trips)	18.1	18.8	20.2	20.9	22.0
Service Hours to Meet Demand (millions)	1.8	2.0	2.1	2.1	2.2
Annual Operating Cost (millions)	\$103.7	\$128.1	\$153.8	\$183.4	\$216.9
Capital Cost - Vehicle Replacement (five-year totals)	--	\$50.2	\$57.9	\$66.7	\$76.6
Capital Cost - New Vehicles (millions)	\$33.5	\$6.9	\$4.3	\$4.6	\$4.4

Vehicle replacement costs through 2010 are accounted for under current funding programs. The 2010 new vehicle capital cost value represents the fleet required to fully close the gap between current levels of service and new service required to meet 100 percent of estimated needs. Values in subsequent years represent the fleet required to meet new levels of need to serve the expanding population.

2015 and 2025 Targets

The Minnesota State Legislature set a goal of meeting 80 percent of Greater Minnesota transit needs by 2015. Current transit services meet approximately 61 percent of passenger needs. To reach the 2015 goal, Greater Minnesota transit systems will need to serve significantly more passenger trips, which will require more service hours. Greater Minnesota transit systems are on track to provide approximately 1.03 million service hours in 2010. By 2015, 1.6 million service hours will be needed to meet the targeted 80 percent of passenger trips; in other words, transit systems will need to collectively operate 570,000 more service hours annually by 2015 in order to meet the 80-percent target.

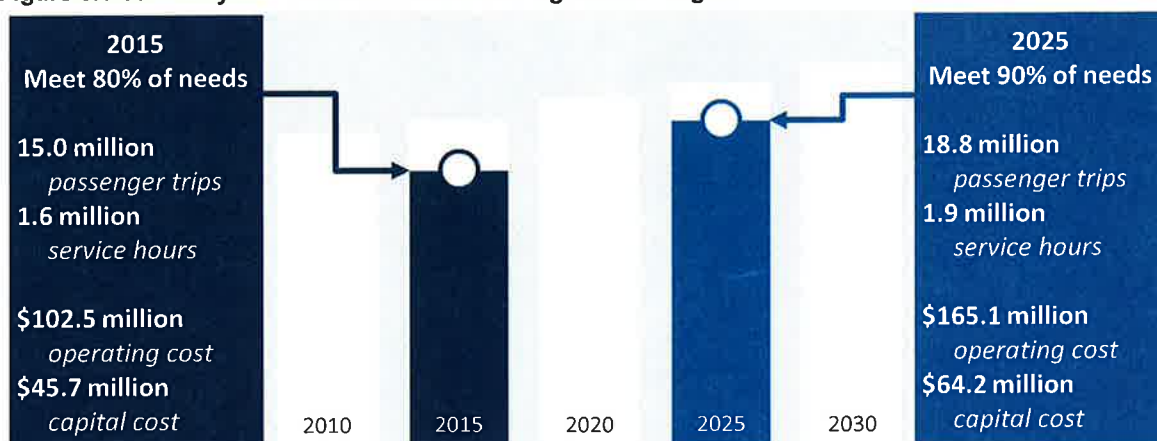

- **\$102.5 million** in annual operating revenues from state, federal, and local sources will be required to meet the 80-percent target in 2015.
- **\$45.7 million** will be needed to meet the capital needs associated with the 2015 target.

In addition, the Legislature directed Mn/DOT to specifically identify the passenger levels, levels of service, and costs necessary to meet 90 percent of total transit service needs by 2025. To reach the 2025 target of serving 18.8 million annual passenger trips, Greater Minnesota transit systems will need to provide 1.9 million annual service hours.

- **\$165.1 million** in annual operating revenues will be required to meet the 90-percent target in 2025.
- **\$64.2 million** in capital investment will be required to meet the 2025 target.

The costs of meeting the specific 80-percent and 90-percent legislative targets are illustrated in Figure 5.1.

Figure 5.1 Summary of Future Needs to Meet Legislative Targets

*2015 capital cost includes vehicle replacements from 2010 to 2015 and new vehicle purchases needed to fill service gap between current levels and 2015 target
 *2025 capital cost includes vehicle replacements from 2015-2025 and new vehicle purchases needed to fill service gap between 2015 target and 2025 target

State/Federal Funding Gap

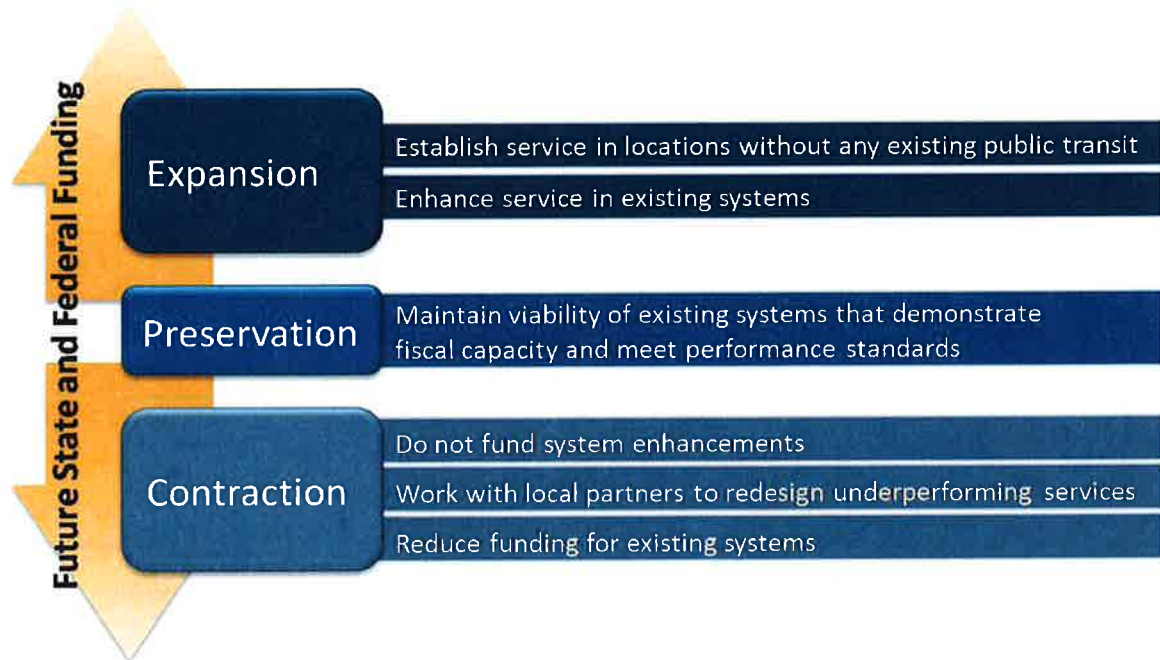

The cost implications of meeting the service needs are substantial. In calculating the funding gap between projected funding and funds needed to meet the 2015 target, it is assumed that the combined state and federal share of total statewide operating funds is 82.7 percent and the local share covers the remaining 17.3 percent. State and federal revenues are expected to remain relatively flat over the near term. By 2015, these combined sources are anticipated to grow to \$55.6 million over 2010 levels of \$47.9 million. The small increase in operating revenue will not even cover the expected cost increases from inflation, leaving a \$29.2 million state/federal funding gap to meet the 2015 target.

Chapter 6: Transit Investment Priorities

In addition to calculating future service needs, the Greater Minnesota Transit Investment Plan sets priorities to guide future transit investments so that unmet service needs can be reduced. As Mn/DOT undertook development of the plan, it sought to better understand the needs of current and potential transit customers, estimate the gap between current service levels and reasonable needs levels, and incorporate the thoughts and directions from stakeholders who routinely deal with transit providers and customers. In addition, Mn/DOT carefully considered the needs of program administration so that any forthcoming changes would not impede progress already being made toward meeting transit needs across the state. The outcome is a delineation of transit investment priorities that correspond to changing funding scenarios.

Figure 6.1 illustrates Mn/DOT’s recommended approach to increased or decreased funding scenarios. Mn/DOT plans to re-evaluate investment priorities every four years and make adjustments as needed.

Figure 6.1 Transit Funding Scenarios and Service Implications

Preservation

Mn/DOT's first priority for Greater Minnesota transit is to preserve existing systems by funding each system at a level sufficient to continue the current level of service in the future. To qualify for preservation, a system must demonstrate local fiscal capacity and meet performance standards as measured through an annual system review process.

Mn/DOT will implement an annual review of transit systems to determine eligibility for state support of system preservation. Mn/DOT will use a three-step review process to establish system eligibility:

1. **Conduct system-level performance reviews based on peer groups.** Three peer groups will be established for large urban systems, small urban systems, and rural systems. Reviews will use the following measures:

- Cost per passenger
- Cost per service hour
- Passengers per service hour
- System revenue to total operating cost ratio

Systems that fall more than 20 percent short of the average performance for any one measure for the peer group within which they reside will be subjected to follow-up operational analysis. New services will be expected to meet performance measures within three years of start-up.

2. **Check compliance with state and federal reporting requirements.** Systems must comply with the following requirements to be eligible for the maximum level of preservation funding:

- Monthly reporting to Mn/DOT
- Incident reporting
- Drug and alcohol reporting
- Federal Financial Accountability and Transparency Act (FFATA) reporting
- Disadvantaged Business Enterprise (DBE) reporting
- Applicable federal reporting
- Satisfactory outcome to annual site visit

3. **Conduct follow-up operational analysis.** If a system fails on either of the first two steps, Mn/DOT will require a follow-up analysis at the system and service segment level as needed to identify causes of poor performance. Mn/DOT will work with systems to improve performance.

Expansion

Service expansion priorities address how additional funds would be spent after all current systems are maintained at their current levels, should increased funding become available for Greater Minnesota transit.

Mn/DOT's highest priority for Greater Minnesota service expansion is to establish service in locations without any existing public transit. This priority is directly shaped by legislative mandate⁷. To be eligible for service, locations would have to demonstrate local fiscal capacity and ability to meet performance measures within three years of development.

After service is established in unserved areas, Mn/DOT's top priorities for enhancing service in existing systems, listed in order of importance, are to:

- **Expand service hours in the morning and night to provide more trips.** Expanding service hours was the most important service expansion identified by current passengers during the onboard survey.
- **Expand multi-county services to link more communities.** Stakeholders expressed a need for more services connecting residents and destinations across county boundaries.
- **Provide service on more days of the week.** Some communities only have service two days a week; others communities have weekday service but would like to add service on one or both weekend days.
- **Expand service frequencies and coverage.** For example, expanding frequencies in an urban system could mean running buses every half hour instead of every hour. In a rural system, it could mean the ability to schedule dial-a-ride one day in advance instead of two. An example of adding coverage in an existing area is adding a new bus route or adding a new community within a county-wide system.
- **Expand service to provide consistent levels of service statewide.** Consistent statewide levels of service mean that peer group communities can provide similar amounts of service hours with their state and federal funding dollars.

⁷Minnesota Statutes, Section 174.01, Subdivision 2, Part 6

Contraction

The following priorities address how Mn/DOT will evaluate funding applications and allocate available funds in the event that future funding for transit is reduced. Four guidelines define Mn/DOT's response to a reduced-funding scenario. Guidelines are listed in consecutive order.

- In an environment of contracted funds, funding for system enhancement will not be considered. In other words, if there is not enough money to adequately preserve all existing systems statewide, no one system will receive any additional money for enhancement.
- Mn/DOT will work with systems to redesign underperforming service segments. Mn/DOT and the transit provider will evaluate performance measures set for peer groups in more detail to see how systems can operate more efficiently.
- Mn/DOT will reduce state and federal funding to those systems with service segments that underperform on the performance measures.
- If decreases in state and federal funding for transit necessitate additional reductions, Mn/DOT will reduce funding allocations to systems that meet or exceed performance standards.

Identified Program Management Tools

Mn/DOT believes every Greater Minnesota public transit system should integrate program management tools into its operations. Mn/DOT expects that these will be utilized by public transit systems regardless of future funding levels.

Mn/DOT will work with systems to ensure the following tools, listed in no particular order, are used to help implement the investment priorities:

- Explore ways to increase the use of technology to gain efficiencies in transit delivery.
- Refine services using service-level performance measures to increase efficiency of transit delivery.
- Coordinate with other transit providers, including tribes (e.g. White Earth Public Transit), volunteer drivers, Section 5310 programs for the elderly and persons with disabilities, and taxi providers, to increase service delivery options.
- Increase marketing to reach more customers and make citizens more aware of the services that exist in their community.
- Provide transit service without charge for disabled veterans (applies only to fixed-route systems).

Appendix A: Supporting Documentation

All documents listed below are available on the project website at <http://www.dot.state.mn.us/transit/reports/investmentplan/>. Accessible formats are available on the web or by request from Mn/DOT.

- Technical Analysis Documentation Memorandum

Appendix B: Glossary

This glossary defines terms that appear in the Greater Minnesota Transit Investment Plan. Many of these terms have multiple definitions; therefore, terms are defined as they are used in the context of this plan.

ADA paratransit: Demand-response transit service mandated by the Americans with Disabilities Act (ADA). Provided within $\frac{3}{4}$ mile of fixed routes to certified users who are unable to use fixed routes due to a disability or health condition.

Capital cost: The cost of equipment and facilities required to support transportation systems: vehicles, radios, shelters, etc.

Coordination: A cooperative arrangement among transportation providers and/or purchasers, which is aimed at realizing increased benefits through the shared management and/or operation of one or more transportation related functions.

Cost-effectiveness: The ratio of the cost of a transit system to the level of service provided. Various measures may be used to determine cost-effectiveness, e.g. cost per passenger trip.

Dedicated funding source: A funding source that by law is available for use only to support a specific purpose, and cannot be diverted to other uses; e.g., the federal gasoline tax can only be used for highway investments and, since 1983, for transit capital projects.

Demand estimation of need: The use of projection models to estimate future year transit needs in terms of both passenger demand and service hours

Demand-response/dial-a-ride service: A transportation service characterized by flexible routing and scheduling of relatively small vehicles to provide door-to-door or point-to-point transportation at the user's demand.

Elderly and disabled transportation: Transportation service to persons that are physically disabled and/or elderly and live in areas with a population over 50,000.

System revenue to total operating cost ratio: Total local revenue, including fares, advertising, service contracts, and taxes, divided by total operating cost.

Federal Transit Administration (FTA): A part of the United States Department of Transportation that administers the federal program of financial assistance to public transit.

Fixed-route transit: Transportation service operated over a set route or network of routes on a regular time schedule; also called regular route.

Local fiscal capacity: A transit subrecipient's ability to:

- Provide, at a minimum, the local share required for capital improvement/replacement and existing operations and expanded services.
- Manage operational and capital transit programs to meet ongoing operational cash flow needs and to meet planned and incidental capital replacement needs.
- Establish and maintain transit accounts within the existing accounting system to manage transit farebox, cash, and contract revenue, and to segregate transit revenue and costs from other agency's program revenue and costs.
- Provide all Mn/DOT fiscal and operational reporting in a timely manner.
- Provide program and project management oversight to assure the fiscal integrity of state and federal funding.

Marketing: A comprehensive process to induce greater use of transportation services by determining the needs or demand of the community and potential customers, developing and implementing service on the basis of these needs, pricing the services, promoting the services, and evaluating the services as implemented in relation to customer needs and marketing goals.

Motor Vehicle Sales Tax (MVST): A source of revenue for Minnesota public transit. See Minnesota Statute 279B.09. Thirty-six percent of money collected on the purchase price of motor vehicles registered in Minnesota is deposited in the metropolitan area transit account under section 16A.88. Four percent must be deposited in the Greater Minnesota transit account under section 16A.88. The Greater Minnesota transit account supports the Public Transit Participation Program in Minnesota Statutes, Section 174.24.

Operating cost: The recurring costs of providing transit service; e.g. wages, salaries, fuel, oil, taxes, maintenance, depreciation, insurance, marketing, etc.

Passenger trip: A one-way trip made by one person from origin to destination. One round trip equals two passenger trips.

Peer group: A group of transit systems which individually share many commonalities, and for which averages are collectively determined on key statistics regarding the operating environment and level of service.

Public transportation: Transportation service that is available to any person upon payment of the fare either directly, subsidized by public policy, or through some contractual arrangement, and which cannot be reserved for the private or exclusive use of one individual or group. "Public" in this sense refers to the access to the service, not to the ownership of the system that provides the service.

Service hours: The total number of hours when the vehicle is in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers). Excludes deadhead hours, but includes recovery/layover time.

Rural area: A geographic area with a population center of less than 2,500.

Service gap: The difference between the actual level of passenger trips and service hours provided and the projected level of need estimated as part of this plan.

Service span: The duration of time that service is made available or operated during the course of the service day e.g., 6:00 a.m. to 10:00 p.m.

Stakeholder: An individual or organization that has an interest in the decisions which affect transit safety and operations. Stakeholders include the public, industry, interest groups, and state and local officials.

Small urban: A geographic area with a central city that has a population of between 2,500 and 50,000.

Total operating cost: The total of all operating costs incurred during the transit system calendar year, excluding expenses associated with capital grants.

Total passengers: The total of all revenue passengers, plus transfer passengers on second and successive rides, and free ride passengers.

Transit-dependent passenger: A person who does not have immediate access to a private vehicle, or because of age or health reasons cannot drive and must rely on others for transportation.

Urbanized area: A geographic area with a central city that has a population of over 50,000.

Vehicle service life: The standard life cycle for different vehicle classifications. The minimum life cycle is determined by the FTA.

Olmstead Plan:

Health Care and Community Supports Administrations Overview of Behavioral Health Homes

January 2015

For more information contact:

Minnesota Department of Human Services
Care Delivery and Payment Reform
P.O. Box 64986
St. Paul, MN 55164-2648
651-431-3307

Introduction

On January 28, 2013, Governor Mark Dayton issued an executive order establishing an Olmstead Sub-Cabinet to develop and implement a comprehensive Minnesota Olmstead Plan. The main purpose of the Olmstead Plan is to move the state forward, towards greater integration and inclusion for people with disabilities.

In accordance with objective 1C under the Healthcare and Healthy Living section of the Olmstead Plan the Health Care and Community Supports administrations are charged with:

Developing a framework to provide services in a person-centered system of care that facilitates access to and coordination of, the full array of primary, acute and behavioral health care.

For people with serious mental illness who are Medicaid consumers and have complex, high-acuity chronic health conditions, there is a need for a framework that allows varying provider types to be at the center of providing care management.

By December 31, 2014, DHS was to engage consumers of services to inform the design of the first framework to serve adults and children; design the model; obtain approval to implement the framework and develop contingency plan for moving work forward if approval is not obtained; and, determine the fiscal effects of statewide implementation in near-term.

The following report provides a summary of the work accomplished in meeting these objectives.

Background

The 2010 Patient Protection and Affordable Care Act (ACA) established the “State Option to Provide Coordinated Care through a Health Home for Individuals with Chronic Conditions”, which provides funding for a two-year enhanced (90-percent) federal match for health home services for eligible Medicaid enrollees. This enhanced federal funding gives states critical resources to build provider capacity and provide an additional window of time needed to realize a return on their investment.

The federal health home model expands upon the concept of the more commonly used term, medical homes (in Minnesota referred to as Health Care Homes) by serving the whole person across the primary care, long-term services and supports, and mental health and substance use disorder treatment components of the health care delivery system. Health homes coordinate a variety of services including primary care and specialty care, and ensure referrals to community supports and services are effectively managed. The key feature of health homes, comprehensive care management, supports the person in managing chronic conditions and achieving their self-management goals by facilitating the provision of clinical services that contribute to improved health outcomes.

The Community Supports and Health Care Administrations of DHS are working together to design a behavioral health home (BHH) model which will operate under a “whole person” philosophy and assure access to and coordinated delivery of primary care and behavioral health services for adults and children with serious mental illness (SMI).

The administrations are working together because of the known barriers to health care access, early mortality and high co-occurrence of chronic health conditions for individuals with SMI. These conditions are generally associated with modifiable risk factors more prevalent in the adult SMI population including smoking, chemical dependency, and poor nutrition. Children who are exposed to psychological trauma are proven to have a significant risk of poorer physical health as adults and also much more likely to have serious emotional disturbance.

People with SMI often lack access to adequate health care and those with access are less likely to receive care for comorbid chronic conditions that meets clinical practice guidelines. Quality care for people with SMI requires coordination between health care and behavioral health systems and integrated treatment for co-occurring mental health and substance abuse disorders.

DHS is developing a framework that will require a standard of integrated care which encompasses mental, behavioral, physical health conditions and considers the influence of multiple conditions, social factors, social function, and consumer preferences to personalize assessment, treatments, and goals of care.

DHS believes that more integrated care, regardless of setting, contributes to improved health and decreases the risk of adverse outcomes.

Consumer and Stakeholder Engagement to Inform Design

Consumer Engagement

In planning for behavioral health homes, DHS has contracted with the National Alliance on Mental Illness (NAMI) Minnesota to engage people living with mental illness across the State in an opportunity to shape policy. Through their participation in focus groups, Medicaid participants from a very wide range of communities are providing feedback on topics that will inform the development of Minnesota’s behavioral health home model. The focus group questions concentrate on topics such as: accessing physical and mental health care, transition of care experiences, methods of obtaining health information, opinions surrounding the facets of integrated care, the ways in which individual, cultural, spiritual, and gender values should be incorporated into the care process.

A preliminary report was completed in December of 2014; see Appendix A, which provides an overview of focus groups completed to date. Focus groups began in September 2014 and at this time, 22 focus groups have been conducted, reaching 182 individuals with mental illness, family members, and transition aged youth. A total of 28 focus groups were scheduled, six groups were rescheduled; five for non-attendance and one due to inclement weather. In total, eight additional focus groups are scheduled to be conducted and two non-English focus group transcripts are pending translation. The

final report, due March 2015, will include a detailed analysis of the data and recommendations for its integration within BHH policy.

Stakeholder Engagement

Stakeholder engagement activities include short and longer-term advisory workgroups, a Request for Information, and a learning community.

An initial short-term advisory workgroup for preliminary input on behavioral health home planning was held in the winter of 2013. This group was one of five workgroups providing input to DHS as part of what was called the Adult Mental Health Reform initiatives informing the Reform 2020 report.

A long-term BHH Advisory Group was developed and began meeting in August of 2013 and has met 11 times. The group is scheduled to meet at least every two months and represents over 26 different stakeholder groups.

A Request for Information (RFI) was issued in April 2013 seeking public input and comments regarding improved integration and coordination of behavioral health and primary care services for Medical Assistance (MA) consumers. Findings were used to inform the design of the framework.

DHS has also established a Behavioral Health Home First Implementers learning community of providers that are interested in becoming certified behavioral health homes. This group will share best practices about how to best meet person's individual needs including person-centered planning and supporting integrated service delivery. Behavioral Health Home First Implementers will also receive support from DHS in preparation for certification. Thirty-five agencies across the state indicated interest in participating in this group. An initial needs assessment was conducted and will inform the development of curriculum focused on health home certification and on topics related to integration of mental and physical health. The group will use different modalities for sharing information, including regional meetings, webinars around specific health home topics, and group-based technical assistance. The group will begin meeting in February of 2015 and will for 18 months. An analysis will be completed to determine if the modality is effective in increasing the capacity to provide integrated care; if it is funding will be sought to continue learning community activities.

Proposal Design

Goals and Guiding Principles

DHS is developing a framework for health homes to serve the needs of complex populations covered by Medical Assistance. DHS is starting with the population with serious mental illness because of the known barriers of health care access, high co-occurrence of chronic health conditions, and early mortality. See Appendix B for the design and implementation timeline.

The goals of the health home framework are to:

1. Improve health outcomes (preventative, routine, treatment of health conditions) of individuals enrolled.
2. Improve experience of care for the individual.
3. Improve the quality of life and wellness of the individual.
4. Reduce health care costs.

The guiding principles of behavioral health homes are:

1. BHH services are distinguished by the presence of a multi-disciplinary team that shares information and collaborates to deliver a holistic, coordinated plan of care.
2. BHH services are an opportunity to better meet the needs of individuals experiencing serious mental illness and their families by addressing the individual's physical, mental, and behavioral health, including wellness goals.
3. BHH services will take a person-centered approach and will engage and respect the individual and family in their health care and recovery/resiliency.
4. BHH services are to respect, assess and use the cultural values, strengths, languages, and practices of the individual and family in supporting the individual's health goals.

Eligibility

Behavioral health home services will be made available to adults with serious mental illness (SMI) or a serious and persistent mental illness (SPMI), and children and youth experiencing a severe emotional disturbance (SED) as defined in MN Statute 245.462 subdivision 20(a) or 245.4871 subdivision 15 (2) and has a current diagnostic assessment as defined in MN Rule 9505.0372 subpart 1 items B or C, as performed or reviewed by a mental health professional employed or contracted by the behavioral health homes.

Potentially eligible individuals will be identified through the Medicaid claims system. DHS will provide certified behavioral health homes with a list of individuals that they already serve that are eligible for BHH services. Certified behavioral health homes will also recruit and identify potentially eligible individuals.

Participation in behavioral health homes is voluntary and eligible individuals will receive state-developed materials to inform them of the choice to participate in a BHH.

After eligibility for BHH services has been determined and information about the services has been provided to the eligible individual, the individual will be given the option to opt in to receiving BHH services. The opt-in process will include an informed consent form created by the State that will include the individual rights and responsibilities as a consumer of these services.

Behavioral health home services may not duplicate services or payments under targeted case management, assertive community treatment (ACT) or home and community-based waivers (HCBW)

where there is case management services provided. Individuals will need information on the various case management options to determine where their needs are best met.

Services

In a behavioral health home, consumers identified with serious mental illness will have their comprehensive physical and behavioral health needs addressed in a coordinated manner. This includes care planning to address chronic conditions (e.g. addressing steps to meet the consumers health goals), ongoing coordination of care between behavioral and physical health (e.g. comprehensive review of all prescribed medications), and also coordination with medical and behavioral specialists not at the BHH site (e.g. appropriate use and timing of elective surgery). Where appropriate non clinical service coordination will be added so that individuals in this model will have health care coordinated with social supports. Appropriate family and consumer support includes education to improve self-management.

“Health Home Services” as articulated by the Affordable Care Act, Section 2703 and in Minnesota State law (256B.0757) requires:

1. Comprehensive care management, using team-based strategies
2. Care coordination and health promotion
3. Comprehensive transitional care between health care and community settings
4. Individual and family support, including authorized representatives
5. Referral to community and social support services, and
6. The use of health information technology to link services, as feasible and appropriate

Several of these services, including health and wellness, direct education and support to family members, and intentional support with transitions, are not traditionally covered under Medicaid and offer an opportunity to provide more person-centered care.

Initial engagement

Behavioral health homes will be responsible to conduct specific activities as part of the initial engagement with clients:

Recruitment

- Take referrals.
- Recruit potential clients.
- Initiate contact with potential clients.
- Schedule intake appointments.
- Engage in community outreach.

Intake

- Check Medicaid eligibility for potential clients.
- Provide clients with BHH program materials, including the rights and responsibilities document, and inform clients about the choice to participate.
- Gather client consent.

- Determine if a diagnostic assessment has occurred within the last 12 months and obtain results. If the diagnostic assessment has not occurred within the last 12 months, assist the client in scheduling an appointment with the licensed mental health professional to complete the updated assessment.
- Set up an appointment with the client for an initial assessment.

A Behavioral health home will be responsible for conducting minimum activities under each of the six federally required services.

Comprehensive Care Management

Comprehensive care management is a collaborative process designed to manage medical, social, and mental health conditions more effectively based on population health data and tailored to the individual patient.

Behavioral health homes will be responsible to conduct the following activities as part of the comprehensive care management services:

(Activities applicable to all patients collectively)

- Design and implement new activities and workflows that increase patient engagement and optimize clinical efficiency.
- Design and implement communication and care coordination tools, to ensure that care is consistent among a client's many providers, as well as between the provider and the BHH.
- Deploy electronic and non-electronic tools to effectively make use of best practices and evidence to guide care efficiently and correctly.

Population Health Management

- Use a searchable electronic health record and patient registry to collect individual and practice-level data that allows providers to identify, track, and segment the population, improve outcomes over time, manage BHH services, provide appropriate follow-up, and identify any gaps in care.
- Select common clinical conditions and target cohorts on which to focus and define the patient population.
- Use the patient registry information to report outcomes to DHS as needed.
- Monitor and analyze data to manage the patient panel
- The integration specialist must review the patient registry regularly to track individuals' medications, lab results, and symptom management and use this data to adjust treatment as needed.
- The registry must contain:
 - (1) For each participant, the name, age, gender, contact information, and identification number assigned by the health care provider, if any
 - (2) Sufficient data elements to issue a report that shows any gaps in care for groups of participants with a chronic or complex condition; and
 - 3) Additional fields to be determined by DHS.

(Activities specific to an individual patient within targeted populations)

- Meet with each client and evaluate their initial and ongoing needs. Elements to evaluate include the patient's clinical condition, feasibility of completing various interventions, and the patient's values, preferences and readiness to engage in self-management and treatment.
- Utilize care strategies including health information technology and other tools to communicate and coordinate with the patient and with other caregivers to ensure that the care plan is being executed safely and efficiently.
- Measure services and interventions offered; the reason for implementation or non-implementation, and outcomes of each intervention.

Care Coordination

Care coordination is the compilation, implementation, and monitoring of the individualized, holistic health action plan with the client's family or identified supports through appropriate linkages, referrals, coordination and follow-up to needed services and supports. Overarching activities of care coordination include the provision of case management services necessary to ensure individuals and their identified supports have access to medical, behavioral health, pharmacology and recovery support services (e.g. housing, access to benefits, vocational, social, and educational, etc.).

Specific care coordination activities are conducted with individuals and their identified supports, medical, behavioral health and community providers, and across and between care settings.

Behavioral health homes will be responsible to conduct the following activities as part of the care coordination services:

Initial assessment

- Assess the client's immediate safety and transportation needs and identify any barriers to participating in BHH services.
- Develop and implement an immediate needs plan for the client.

Comprehensive wellness assessment

- Conduct a comprehensive wellness assessment. The assessment process must begin within 30 days of intake and be completed within 60 days.
- Include a face-to-face meeting between the client and the systems navigator. The integration specialist must also meet with the client to complete components of the wellness assessment. In a mental health setting, the integration specialist must be an RN and focus on the individual's health care needs. In a primary care setting, the integration specialist must be a mental health professional and focus on the individual's mental health needs.
- Talk with internal and external professionals to gather information for the health action plan and make initial connections to begin establishing relationships required for ongoing care coordination.
- The assessment must include the skills, strengths, current resources, and current needs in the following areas:
 - Review of the diagnostic assessment;
 - Mental health and chemical/substance use and abuse knowledge of symptoms and illness management and treatment resources, and the individual's view of recovery;

- Screenings for substance abuse using CAGE-AID or GAIN-SS tools, alcohol, and tobacco. A substance abuse screen is not required if a substance abuse disorder is already known and documented.
- Health as it relates to chronic conditions, health wellness and literacy, lifestyle, self-management, and nutrition, access to health care, including information about the client's primary care doctor, primary care clinic, and dentist;
- Culture and spiritual beliefs and practices;
- Employment and education;
- Social functioning, including the use of leisure time;
- Interpersonal functioning including relationship with family and social support network;
- Self-care and independent living capacity;
- Income, financial assistance and legal;
- Risks and vulnerabilities;
- Housing;
- Transportation;
- Program utilization; (e.g. food support, Minnesota Family Improvement Program, Minnesota Supplemental Aid, Child Care Assistance Program)
- Access to food;
- Access to child care;
- Social services and community supports
- Self-navigation and self-advocacy skills; and
- Other domains as appropriate.
- Obtain appropriate releases of information as needed to gather information needed for the comprehensive wellness assessment. DHS will create a release of information template for BHHs to utilize if they do not have such a form already developed. All releases of information must follow Minnesota state privacy laws.
- Conduct a portion of the assessment in the client's home/living situation. The client has the right to refuse services in their home.

Health action plan development

- Draft an initial health action plan based on the comprehensive assessment within 60 days of intake.
- Talk with the client to ensure that the health action plan is based on their identified needs and goals.
- Demonstrate the client-centered nature of the plan by including the client's goal statement in first person language and the client signature. Provide a copy of the plan to the client.
- Update the comprehensive assessment and health action plan at least every 6 months thereafter.

Ongoing care coordination

- Maintain regular and ongoing contact with the client and/or their identified supports to prevent unnecessary inpatient readmissions, emergency department visits and/or other adverse outcomes such as homelessness, loss of established care/service providers, and loss of employment/schooling.
- Monitor client progress on goals in the health action plan and the need for plan alterations.

- Monitor the use of routine and preventative primary care, dental care, and well-child physician visits.
- Conduct appropriate referrals.
- Assist the client in setting up needed appointments, preparing for appointments, and accompanying the client to appointments as appropriate.
- Assist the client in follow-up care and follow-through on recommendations from the appointment(s).
- Initiate and maintain coordination with client's providers and formal and informal supports to ensure that the client has the resources necessary to follow the health action plan.
- Identify and share individual level information in a timely manner with professionals and providers that are involved in the individual's care.
- Demonstrate engagement of area hospitals, primary care practices and behavioral health providers to collaborate for care coordination.
- Maintain current releases of information as needed for communication with providers that are involved in the client's care.
- Ensure linkages to medication monitoring if it is an identified need.
- Coordinate communication and collaboration within the BHH team on behalf of the client.
- Foster communication with and between the individual, their providers and their identified supports.

Health and Wellness Promotion Services

Health and wellness promotion services encourage and support healthy living and motivate individuals and/or their identified supports to adopt healthy behaviors and promote better management of their health and wellness. Health and wellness promotion services place a strong emphasis on skills development through health education and wellness interventions so individuals and/or their identified supports can monitor and manage their chronic health conditions to improve health outcomes.

Behavioral health homes will be responsible to conduct the following activities as part of the health and wellness promotion services:

- Provide clients with information to increase their understanding of the illnesses/health conditions identified in the comprehensive wellness assessment, and educate clients on how those conditions relate to and impact various facets of their life.
- Work with clients to increase their knowledge of illness-specific management as well as overall daily health maintenance.
- Support clients in activities aimed at increasing their self-management and reaching their health goals.
- Support clients in recovery and resiliency.
- Help clients and/or clients' identified supports to make healthy lifestyle choices within their budget.
- Provide onsite coaching, classes, and information on topics including: wellness and health-promoting lifestyle interventions, substance use prevention/early intervention and harm reduction, HIV/AIDS prevention/early intervention, STD prevention/early intervention, family planning and pregnancy support, smoking prevention and cessation, nutritional counseling, obesity reduction and prevention, increasing physical activity, and promoting independence and skill development related to self-administration of medications.

Comprehensive Transitional Care

Comprehensive transitional care activities are specialized care coordination services that focus on the movement of individuals between or within different levels of care or settings or while shifting from the use of reactive care and treatment to proactive care via health promotion and health management. Transition services are designed to streamline plans of care and crisis management plans, reduce barriers to timely access, reduce inappropriate hospital, residential treatment, and nursing home admissions, interrupt patterns of frequent emergency department use, and prevent gaps in services which could result in (re)admission to a higher level of care or longer lengths of stay at an unnecessary level of care.

Behavioral health homes will be responsible to conduct the following activities as part of the comprehensive transitional care services:

- Ensure adequate and continuous client services and supports following and in between services and settings such as, hospitalization, homelessness, shelters, domestic violence shelters, residential treatment, prison, juvenile justice, children and family services, treatment foster care, foster care, special education and other settings and services with which the client may be involved.
- Participate in discharge planning in collaboration with the individual and the appropriate facility staff to assist in the development and implementation of the transition of the client to the least restrictive setting possible.
- Advocate with the client to ensure that clients/families are included in transition planning.
- Work with other agencies to ensure that information is shared between agencies regarding a transition.
- Establish a protocol for contacting clients and/or their identified supports and services following discharge from hospitals, residential treatment, and other settings, to assure clients are reconnected to ongoing services and community and social supports.

Referral to Community and Social Support Services

Referral to community and social support services occurs in collaboration with the client and/or their identified supports. The BHH provider identifies and provides referrals to a variety of services and assists clients in setting up appointments, preparing for appointments, and accompanying the client to appointments as appropriate.

Behavioral health homes will be responsible to conduct the following activities as part of the referral to community and social supports services:

- Connect clients to community resources as identified in their comprehensive wellness assessment, including but not limited to, medical and behavioral health care, entitlements and benefits, respite, housing, transportation, legal services, educational and employment services, financial services, wellness and health promotion services, specialized support groups, substance use prevention and treatment, social integration and skill building, and other services as identified by the individual and/or their identified supports.
- Check in with the client and their family after a referral is made in order to confirm if they need further assistance in scheduling or preparing for appointments, or assistance in following up after connecting with community resources.

- Maintain adequate knowledge of agencies and resources in order to connect individuals and/or their caregivers to a wide array of support services to help them overcome access or service barriers, increase self-efficacy skills and improve overall health.

Individual and Family Support Services

Individual and family support services are activities, materials, or services aimed to help clients reduce barriers to achieving goals, increase health literacy and knowledge about chronic condition(s), increase self-efficacy skills, and improve health outcomes.

Behavioral health homes will be responsible to conduct the following activities as part of the individual and family support services:

- Assist clients and families with accessing self-help resources, peer support services, support groups, wellness centers, and other care programs focused on the need of the individuals and their families and/or identified supports.
- Assist clients with obtaining and adhering to prescribed medication and treatments.
- Offer family support and education activities.
- Support clients and/or clients' identified supports in improving their social networks.
- Teach individuals and families how to navigate systems of care in order to identify and utilize resources to attain their highest level of health and functioning within their families and community.

NOTE: Utilization of health information technology is federally required to link services, as possible and appropriate. BHH provider standards may evolve as experience is gained and as permitted by Minnesota law.

Provider Requirements

Federal requirements

Behavioral health home providers must have the capacity to perform the health home functions specified below by Centers for Medicare and Medicaid Services (CMS):

- 1) Provide quality-driven, cost-effective, culturally appropriate, and person- and family-centered health home services;
- 2) Coordinate and provide access to high-quality health care services informed by evidence-based clinical practice guidelines;
- 3) Coordinate and provide access to preventive and health promotion services, including prevention of mental illness and substance use disorders;
- 4) Coordinate and provide access to mental health and substance abuse services;
- 5) Coordinate and provide access to comprehensive care management, care coordination, and transitional care across settings. Transitional care includes appropriate follow-up from inpatient to other settings, such as participation in discharge planning and facilitating transfer from a pediatric to an adult system of health care;
- 6) Coordinate and provide access to chronic disease management, including self-management support to individuals and their families;
- 7) Coordinate and provide access to individual and family supports, including referral to community, social support, and recovery services;

- 8) Coordinate and provide access to long-term care supports and services;
- 9) Develop a person-centered care plan for each individual that coordinates and integrates all of his or her clinical and non-clinical health-care related needs and services;
- 10) Demonstrate a capacity to use health information technology to link services, facilitate communication among team members and between the health team and individual and family caregivers, and provide feedback to practices, as feasible and appropriate; and
- 11) Establish a continuous quality improvement program, and collect and report on data that permits an evaluation of increased coordination of care and chronic disease management on individual-level clinical outcomes, experience of care outcomes, and quality of care outcomes at the population level.

State requirements

DHS will certify behavioral health homes and providers must be enrolled as a Medicaid provider. Behavioral health homes must serve as the central point of contact for consumers and ensure person-centered development of a health action plan and implementation of services which improve experience of care, health outcomes and reduce avoidable health care costs.

At a minimum, BHH providers will be expected to:

- Be enrolled as a Medicaid provider and comply with the Medicaid program requirements.
- Successfully complete the State certification process and maintain certification by meeting standards as developed by the State.
- Demonstrate processes that allow them to understand and serve the BHH population.
- Maintain the required BHH team structure as described above and provide the federally required services of comprehensive care management, care coordination and health promotion, comprehensive transitional care, individual and family support services, referral to community and social support services, and use of health information technology to link services.
- Conduct comprehensive screenings and assessments that address behavioral, medical, and social service and community support needs.
- Create and maintain an individualized health action plan for each consumer that encompasses behavioral and physical health and social services and community supports.
- Use health information technology to link services, identify and manage care gaps; and facilitate communication among health home team members and other providers.
- Use an electronic health record and patient registry to collect individual and practice-level data that allows them to identify, track, and segment the population and improve outcomes over time.
- Establish processes in order to identify and share individual level information in a timely manner with professionals and providers that involved in the individual's care.
- Demonstrate engagement of area hospitals, primary care practices and behavioral health providers to collaborate with the Health Home on care coordination.
- Track individuals' medications, lab results, and symptom management and use this data to adjust treatment as needed.
- Demonstrate commitment by leadership to pursue integration and support practice transformation.
- Establish a continuous quality improvement plan, and collect and report data that will inform state and federal evaluations.

BHH teams will be integrated with both primary care and behavioral health providers:

- In a behavioral health setting, the required integrated team must include a nurse care manager.
- In a primary care setting, the team must include a licensed mental health professional.

Behavioral health home providers must also:

- Directly provide, or subcontract for the provision of, all required health home services.
- Maintain documentation of all team member qualifications in their personnel files.
- Participate in federal and state-required evaluation activities including documentation of behavioral health home services.
- Maintain compliance with all of the terms and conditions of a certified behavioral health home provider or will be discontinued as a provider of services.
- Provide a 60 day notice if they plan to determinate the delivery of behavioral health home services. Providers must inform consumers that they will no longer provide services and support the individual in finding a new behavioral health home provider.

Team Members

BHH services will be administered through a team based approach. The members listed below are the minimum requirements for a behavioral health home team, with the exception of an optional external professional. In order to qualify as one of these team members, a person must meet at least one of the qualifications listed below their title. One person can fill more than one membership roll.

Team Member: Consumer

Roles and Responsibilities

The decision to participate in BHH services rests with the consumer. The BHH model is designed to promote consumer's trust in their care team and to ensure holistic treatment of consumer's medical and behavioral health. Consumers play a vital part in the development and management of their health under the BHH model, therefore consumers are responsible for voicing their needs, concerns, questions, barriers, strengths, skills, desires and goals to their Behavioral Health Home team with the support and assistance of the Qualified Health Home Specialist and the Care Coordinator as needed. Consumers are responsible for communicating regularly with the Behavioral Health Home team, including reaching out to appropriate team members as needed and returning phone calls, emails, and all other appropriate forms communication. They are responsible for engaging in the planning and implementation processes of their treatments and therapies.

Team Member: Team Leader

Required Qualification

- Clinic manager
- Other executives

Roles and Responsibilities

The team leader provides the BHH with executive leadership as a champion for integration. They determine the size and overall composition of the BHH team. They are responsible for ensuring that needed memorandums of understanding are in place and that the BHH has access to resources and

tools including but not limited to overhead, health information technology, protected time on a calendar, support staff, medical records, and screening tools. They serve as the outward facing liaison to the wider community and provide administrative outreach to diverse communities. The team leader determines quality improvement and communication protocols for the BHH and is responsible for overseeing the certification and recertification process, and ensuring that the BHH meets all required reporting and evaluation responsibilities.

Team Member: Integration Specialist (Care Management)

Required Qualification

- Registered Nurse when BHH services are offered in a mental health setting.
- Mental health professional as defined in M.S. 245.4871 Subd. 27, 1-6 or M.S. 245.462 Subd. 18 1-6 when BHH services are offered in a primary care setting.

Roles and Responsibilities

The integration specialist position illustrates the importance that the BHH program places on integration of primary care and mental health. The integration specialist is the reciprocal professional whose required qualifications are contingent on the setting of the BHH. If the BHH is located in a mental health setting, the integration specialist must be a Registered Nurse whereas if the BHH is located in a primary care setting, the integration specialist must be a mental health professional.

With the guidance of their supervisor and in collaboration with the BHH team, the integration specialist is the primary team member responsible for providing the comprehensive care management within the BHH. The integration specialist will utilize the patient registry to manage medical, social, and mental health conditions based on population health data and tailored to the individual patient. The integration specialist is responsible for activities that are applicable to all patients collectively and to individual patients within the targeted populations.

The integration specialist is responsible for individual and family support services in relation to the management of population health. The integration specialist may also contribute to the provision of the other health home services and is also available to run wellness groups for clients as appropriate. In some settings, the integration specialist may serve as the supervisor of systems navigator or the same individual may serve both positions in settings where client populations are small.

Team Member: Behavioral Health Home Systems Navigator (Care Coordination)

Required Qualification

Case manager as defined in M.S. 245.4871 Subd.4, M.S 245.462 Subd. 4 or
Mental health practitioner as defined in M.S. 245.4871 Subd. 26. or M.S 245.462 Subd. 17

Roles and Responsibilities

With the guidance of their supervisor and in collaboration with the BHH team, the BHH systems navigator is the primary entity responsible for providing the care coordination within the BHH. The BHH systems navigator may contribute to the provision of health and wellness promotion services. In settings with a large client population, there may be multiple BHH systems navigator within one BHH.

Conversely, in settings with small client populations, there may be one individual that fulfills the roles of both integration specialist and systems navigator. They are also available to conduct wellness groups as appropriate contingent on their individual training.

Team Member: Qualified Health Home Specialist

Required Qualification

- Community health worker as defined in [M.S. 256B.0625](#) Subd. 49
- Peer support specialist as defined in [M.S. 256B.0615](#)
- Family peer support specialist (upcoming definition and certification at DHS),
- Case management associate as defined in [M.S. 245.462](#) Subd.4 (g) or [M.S. 245.4871](#) Subd. 4 (j),
- Mental health rehabilitation worker as defined in [M.S. 256B.0623](#) Subd. 5 (4)

Roles and Responsibilities

The qualified health home specialist serves as a coach whose primary focus is to support and assist clients in reaching their goals. They interact with the clients on the phone or in person on a regular basis to build trusting relationships and assist the client with identifying barriers to accessing care. They can meet with a client before appointments, help clients organize health concerns and prioritize issues to discuss with health providers. They can also meet with clients after office visits to review provider instructions and check for client understanding and access to resources to follow provider instructions. They provide ongoing motivation, encouragement, and positive feedback when the client makes constructive changes or progress.

With the guidance of their supervisor and in collaboration with the BHH team, the qualified health home specialist is the primary entity responsible for the health and wellness promotion services and assists the BHH systems navigator in coordinating care, serving as the secondary entity responsible for care coordination services.

The qualified health home specialist is responsible for providing individual and family support services on a regular basis for overall client needs. The qualified health home specialist may contribute to the provision of the comprehensive transitional care and referral to community and social support services. Qualified health home specialists are also available to conduct wellness groups as appropriate contingent on their individual training. There may be multiple qualified health home specialists dependent on the size of the BHH.

Team Member: Consulting Physicians

Required Qualification

- Primary care physician
- Psychiatrist
- Psychologist
- Specialized MD/ therapist
